## Abbreviations

BDO: Block Development Officer

CPCB: Central Pollution Control Board

SPCB: State Pollution Control Board

CO: Circle Officer

DC: Deputy Commissioner

ACF: Assistant Conservator of Forests

DFO: Divisional Forest Officer

SDM: Sub Divisional Magistrate

GM: General Manager

DEO: District Education Officer

DDC: Deputy Development Commissioner

AMC: Additional Municipal Commissioner

RO: Regional Officer, JSPCB

SP: Superintendent of Police

DEP: District Environment Plan

DSMS: Decentralized Sewage Management System DSP: Deputy Superintendent of Police

JSPCB: Jharkhand State Pollution Control Board

MoEF&CC: Ministry of Environment, Forest and Climate Change

MS: Member Secretary, DEC

NGT: National Green Tribunal

CTO: Consent to Operate

BSL: Bokaro Steel Plant

SAIL: Steel Authority of India Limited

TA: Town Administration

NP: Nagar Parishad

SHG: Self Help Group

STP: Sewage Treatment Plant

CMC: Chas Municipal Corporation

GP: Gram Panchyat

ASAP: As soon as possible

PWD: Public Works Department

DEC: District Environment Committee

## Preface

Hon'ble National Green Tribunal (NGT) since its assent by the supreme legislative body of India (Indian Parliament) in June 2010 has been playing an augmented role in the conservation of national green environment. It pledges to maintain a healthy, sustainable and congenial atmosphere nationwide for all the creatures and specially the human society so that they can pursue a life full of health.

To make this mission successful it is important for the whole nation to participate in it at each unit of national administration. Thus, NGT took a constitutional reference to compliance with the provisions made in the constitution of India;

*“under Articles 243 G, 243 W, 243 ZD read with Schedules 11 and 12 and Rule 15 of the Solid Waste Management Rules, 2016, it is necessary to have a District Environment Plan to be operated by a District Committee (as a part of District Planning Committee under Article 243 ZD) with representatives from Panchayats, Local Bodies, Regional Officers, State PCB and a suitable officer representing the administration, which may in turn be chaired and monitored by the District Magistrate. Such District Environment Plans and Constitution of District Committee may be placed on the website of Districts concerned.”*

This order was re-stressed by Hon'ble NGT in O.A. No. 360/2018, order dated 26.09.2019, where Hon'ble Tribunal said,

*“Compliance of this direction may also be seen by the Chief Secretaries of the States/UTs. This may not only comply with mandate of law but provide an institutional mechanism for effective monitoring of environment norms”*

Accordingly, Forest, Environment and Climate Change Department, Government of Jharkhand, through notification no. 4869 dated 26.12.2019, reconstituted District Environment Committee and also gave it responsibility of drafting District Environment Plan (DEP).

Government of India has enacted acts such as The Water (Prevention and Control of Pollution) Act, 1974 (No.6 of 1974), The Air (Prevention and Control of Pollution) Act, 1981 (No.14 of 1981) and The Environment Protection Act, 1986 (No.29 of 1986) besides other acts which have implications on environment related governance.

Ministry of Environment, Forest and Climate Change (MoEF&CC) have notified various waste management rules under The Environment Protection Act, 1986 from time to time to manage the burgeoning issue of waste and thus prevent and control environmental damage.

To gain 360-degree view of situation of environment management related practices in Bokaro district, the newly constituted District Environment Committee organized several meetings. The committee also segregated data according to model data collection format prescribed by Central Pollution Control Board (CPCB) and tried to explore opportunities of better implementation of various acts and rules inside the district.

The appreciated efforts of the committee has resulted the **work** into this **dynamic draft**. This is to take proper assessment of the present scenario of environment related governance in the district at all administrative levels from urban to Panchayat. This also elicits present and future responsibilities of different functionaries and task forces related to implementation of acts and rules in the district. This draft paves future road map for governing district environment.

## 1. Introduction

This document has been drafted in compliance with the honorable NGT'S order in O.A. No. 710-713/2017, issued on 15-07-2019.

When it comes to the existence of the 'Environment' it is interactive consequences between the biotic components like animals, plants, and other living organisms, and abiotic the components – water, air, soil, sunlight etc. Many day to day activities as well as economic activities have a fall out of disturbing the environment around us. As, these activities are unavoidable, the need of the time is to manage the waste and pollutants in such a way that it affects our environment minimally.

The right justification is not to limit management of environment to only management of waste and pollutants. Rather, it also includes extracting our natural resources like drinking water in a sustainable manner and conserving our natural heritage like forest which provides innumerable number of eco-system services.

Hence, getting a holistic picture of scenario of environment is much more essential. The current status of implementation of applicable acts and rules made under them, future planning for their compliance and need of resources for the same. It is also essential that all the departments have a clear objective in their mind and are also clear about their role towards betterment of environment.

It is therefore mandatory to be practiced at district level, and thus District Environment Plan is condition sine qua non to sustainable development of district and it's citizen's health.

The scope of District Environment Plan is clearly laid out in Hon'ble NGT order in O.A. No. 360/2018, dated 12.09.2019, which said:

*“while fixing a schedule for further appearance of the Chief Secretaries of all the States/UTs, direction has been issued to compile information with reference to the following specific thematic areas viz.:*

- *In compliance with Solid Waste Rules including Legacy Waste.*
- *In compliance with Bio-medical Waste Rules.*
- *In compliance with Construction & Demolition Waste.*
- *In compliance with Hazardous Waste Rules.*
- *In compliance with E-waste Rules.*
- *351 Polluter Stretches in the country.*
- *122 Non-attainment cities.*
- *100 industrial clusters.*
- *Status of STPs and re-use of treated water.*
- *Status of CETPs/ETPs including performance.*
- *Ground water extraction/contamination and re-charge.*
- *Air pollution including noise pollution.*
- *Illegal sand and coal mining.*
- *Rejuvenation of water bodies”*

Forest, Environment and Climate Change Department, Government of Jharkhand, through notification No. 4869 dated 26.12.2019 also included implementation of

- Air Act
- Water Act

In the purview of the District Environment Plan.

Hon'ble NGT in O.A. No. 360/2018, order dated 26.09.2019, in Para 8, also said:

*“Such information is to be furnished to the CPCB by the Chief Secretaries of all the States/UTs indicating:*

- *Current status*
- *Desirable level of compliance in terms of statutes*
- *Gap between current status and desired levels.*
- *Proposal of attending the gap with timelines.*
- *Name and designation of designated officer for ensuring compliance to provisions under statute.”*

The above order provides the broad contours for developing a District Environment Plan. Thus, this District Environment Plan would follow above broad guidelines in context of Bokaro district.

### **1.1 Basic features of the draft (Bokaro District Environment Plan) :-**

1. This draft is dynamic in nature with all the provisions of possible updates demanded by the changing scenario of the district environment. The present recommendation of update on the basis of revision is once every two years.
2. The document elicits the guidelines for both urban and rural areas' environment management plan.
3. The prescriptions will mostly need attention by responsible parties to ensure cleaner In order to get the environment of Bokaro better, all the responsible authorities will have to take part actively. In course of time both the State and the Centre government have to come forward for financial support. **The district administration has to work and look forward to all the possible platforms of revenue generation.**
4. The draft has the provisions of convergence during the implementation of all the applicable rules.
5. Target accomplishment is possible on the condition that:-
  - a). **Responsible government functionaries are supposed to take initiatives.**
  - b). **Heads of the local bodies are expected to participate actively.**
6. Report preparation, submission on demand at an interval and progress record to be updated with the **District Environment Committee mandatorily.**

## 1.2. Environmental Status of India:-

A huge and continuously rising population of the country and in order to impart different economic platforms for the survival and sustainable growth of the population, deliberately or by default we generate wastes in quite relevant proportion. Though sometimes the ignorance and unawareness of people causes a sheer increase in the quantity of the wastes. By product of industries and many similar activities which are unavoidable augment the waste production in India.

Urban India witnesses the waste generation of 65 million tones / year. Only 47 million tones (MT) of the waste is collected, 11.9 MT is treated and 31 MT is dumped in landfill sites. In terms of waste generation Urban India ranks 3rd position in the world and by 2050 waste production is expected to rise to 440 million tones. This is estimated figure for only municipal waste generated in urban area and does not include many other kind of waste such as Construction and Demolition waste, e-waste etc.

Year	Source	Generation (million Tons per annum)
2017	Based on 450 gm. per capita daily generation and urban population of 440million*	72
2017	Based on 450 gm. per capita daily generation and urban population of 440million*	62
2014-15	Central Pollution Control Board	52
2013-14	Task Force on Waste to Energy, Planning Commission	62

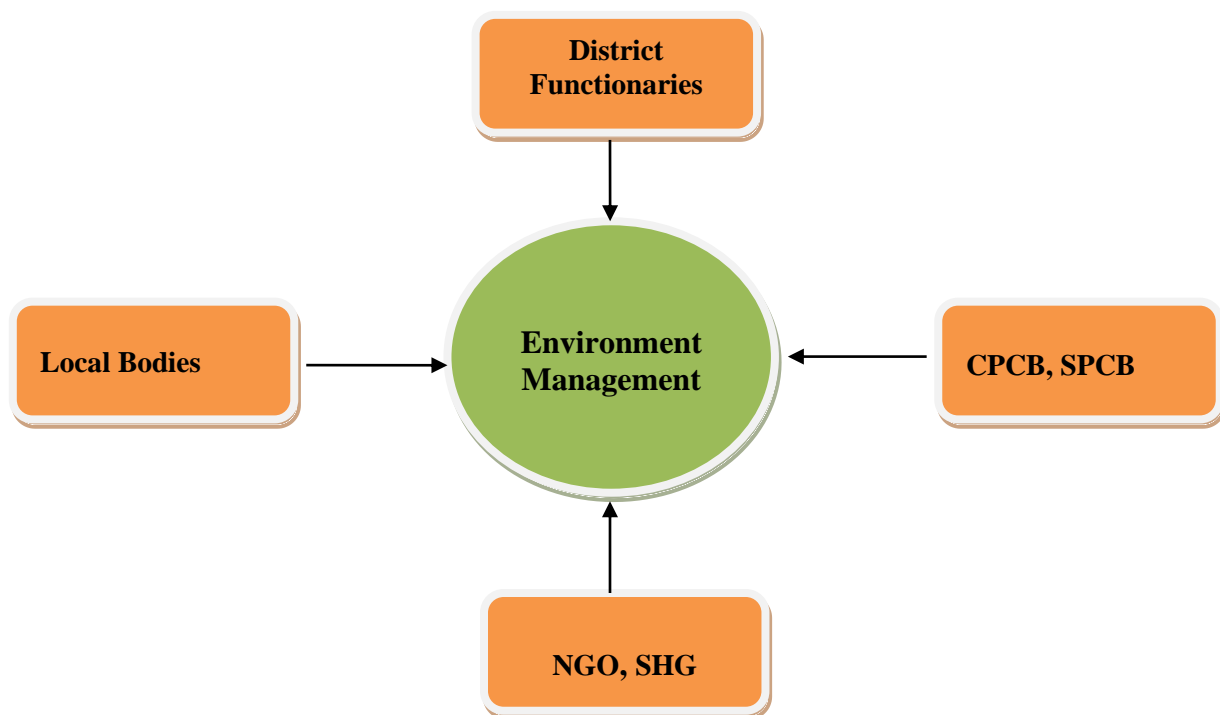

Though the per capita daily generation of waste is lower in non-urban setup, yet it can be as high as 30-35 million tons per annum. This figure doesn't really come in discussion because of they are not usually concentrated like in urban areas but are mostly dumped and burnt in backyard.

Various subordinate legislations for regulating the manner of disposal and dealing with generated waste are made under the umbrella law of Environment Protection Act, 1986 (EPA). Specific forms of waste are the subject matter of separate rules and require separate compliances, mostly in the nature of authorizations, maintenance of records and adequate disposal mechanisms.

Need of the hour is proper implementation of all the rules made under various act at district level. Due to multiplicity of the rules and technicalities involved, it is necessary that the implementation is steered by ensuring convergence between various stakeholders, be it regulator or the polluter.

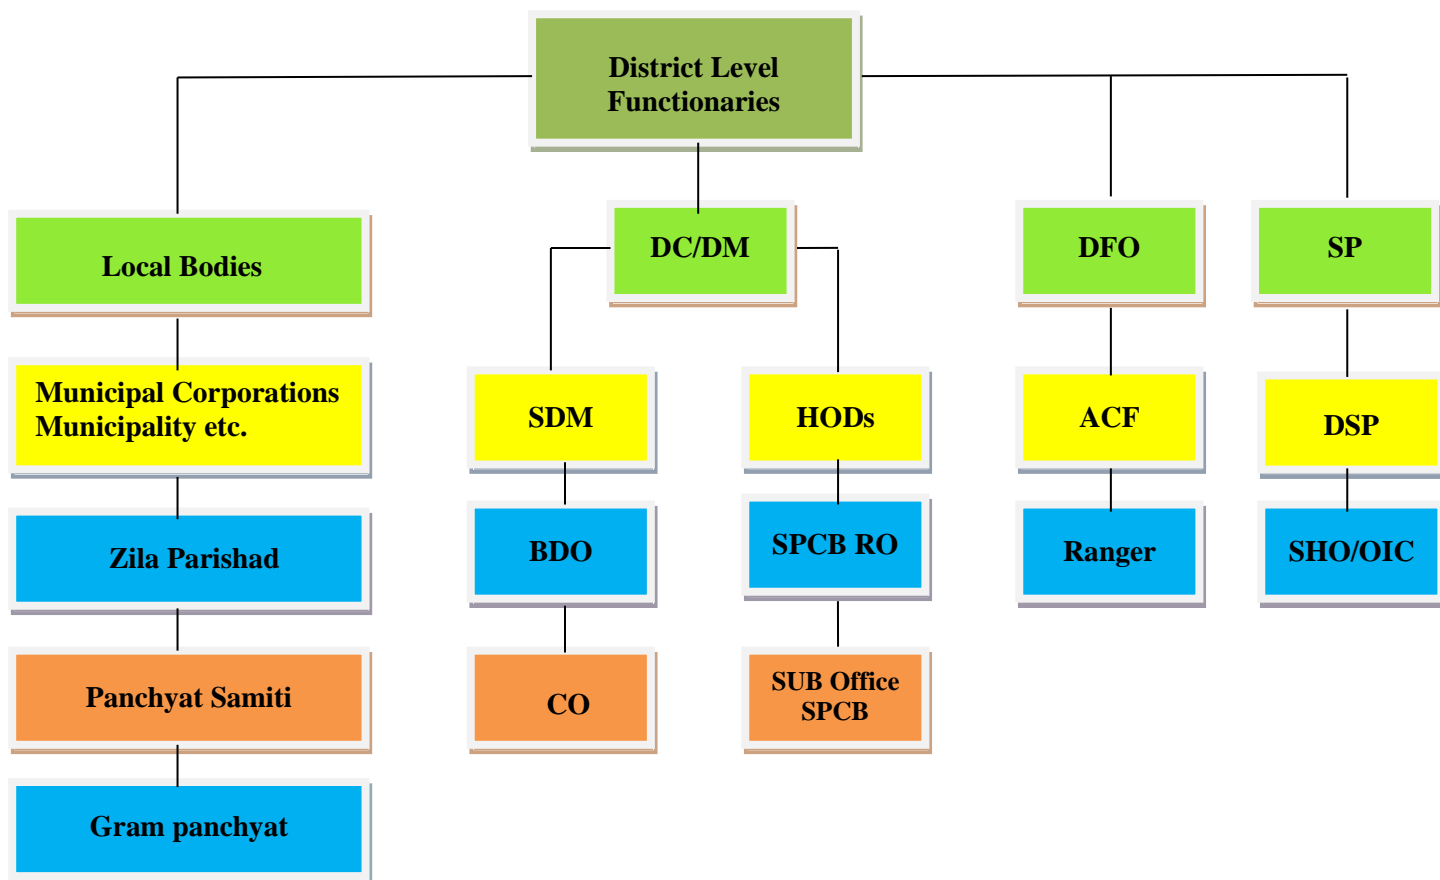

District Environment Plan goes beyond only Pollution Management Plan. Management and regulation of polluting activities in India has been mainly devolved to local bodies and State Pollution Control Boards (SPCB). But, it is much more than that. There has to be co-ordination between district authorities and local bodies so that the district as a unit is able to comply with all the rules. Officials representing State Pollution Control Boards should not only check whether rules are being complied or not but go beyond that to facilitate one and all to manage polluting activities and reduce impact on environment.

*Figure 1. Environment Management Co-ordinates*

At this juncture, it would also be wise to have a relook at the administrative setup at district level (More or less consistent across India). The Diagram represents it qualitatively given below:

*Figure 2. District Level Administrative Structure*

### 1.3. Basic Environmental Features of Bokaro District:-

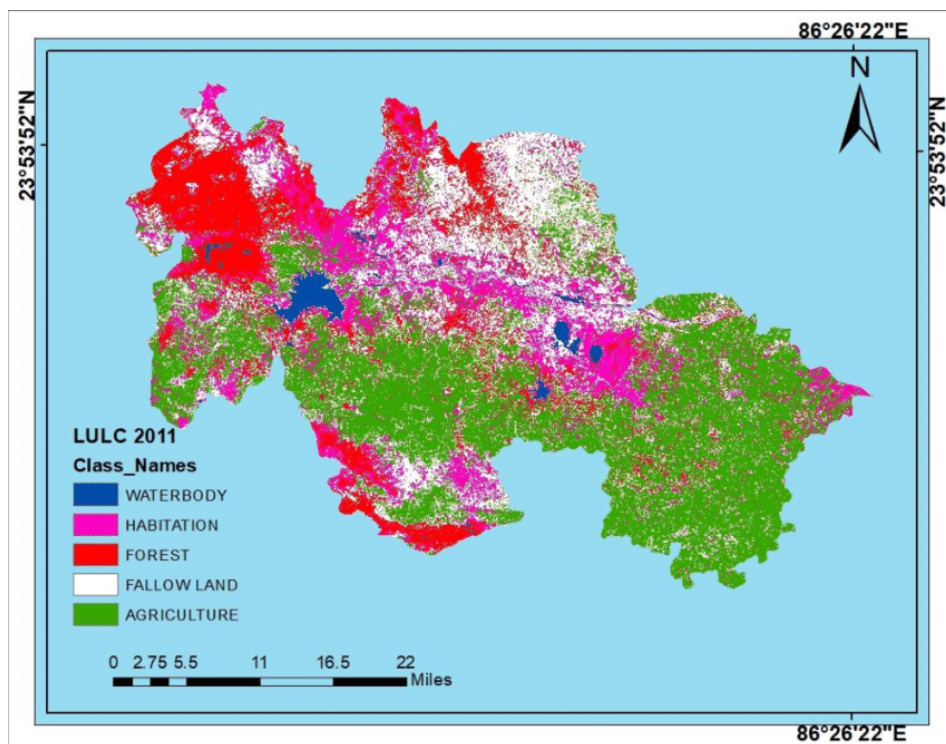

Bokaro district is one of the most industrialized zone of India. This is one of 24 districts of Jharkhand state. It was created on 1<sup>st</sup> April 1991. This is located east to Dhanbad district, west to Ramgarh district, south to Purulia district (WB) and north to Giridih, Hazaribagh and Dhanbad. This is industrial capital of Jharkhand state. Its latitudinal location – 23.26” to 23.57” N and 85.34 to 86.26” E. its elevation is 200 to 546 m from the sea level.

*Figure 3. Geographical Location of Bokaro with respect to Jharkhand*

*Figure 4. Map showing different blocks of Bokaro along with Rivers.*

*Figure 5. Land Uses in Bokaro district*

Data related to Bokaro district in a glance:

Items	Statistics	
Population (2011 Census)	20.62	Lakhs
Urban Population(2011 Census)	10.78	Lakhs
Rural Population (2011 Census)	9.83	Lakhs
Area	2883	Km <sup>2</sup>
Forest Area	784.89	Km <sup>2</sup>
No. of Urban Local Body	3	
No of Blocks	9	
No. of Gram Panchayat	249	
No. of Revenue Villages	635	
Total solid waste generated in Urban area	157	MT/Day
Total solid waste generated in district app. (Assuming rural creation of waste as 1/5 <sup>th</sup> of Urban)	187	MT/Day
Total Liquid waste generated in urban areas	29	MLPD

## 2. Waste Management Plan:-

Unwanted production of any life style is referred as 'WASTEW'. Areas which are industry juncture of the country become the destination of common population for employment. This attracts the migrants for survival and eventually they start getting settled there. Facilities of basic and the most radical amenities gradually change the place in an urban area. Because of dense population waste is naturally produced. Hence, the need of waste management comes in picture. Though waste is naturally generated at all the administrative units like village, panchayat, block, municipality to a nation.

We could take look at quantity of wet waste (which can be composted) generated in the whole composition of municipal waste (in lower middle-income category) :-

*Figure-6 Typical waste Proportion in low income category country*

The fact that around 55% of our waste is wet waste, should direct our policy of managing it. Source point segregation can reduce the burden on our dump yards.

It will be interesting to note that India lags far behind in segregation at source point. Costly and complex waste operations must compete for funding with other priorities such as clean water and other utilities, education, and health care. Waste management is often administered by local authorities with limited resources and limited capacity for planning, contract management, and operational monitoring. These factors make sustainable waste management a complicated proposition on the path of sustainable development.

Segregation at source can be biggest challenge for any local body. This is much more amplified because of lack of expert managers, lack of budget, poor financial health and low sources of income of local bodies.

City	State	Population (million)	Door-to-door Collection from Households (%)	Segregation at Source (%)
Vengula	Maharastra	10	100	95
Indor	Madhy Pradesh	0.5	100	90
Thiruvananthputam	Kerala	0.9	100	76
Gangtok	Sikkim	0.1	90	30
Warangal	Telangana	0.9	90	na
Tirunelveli	Tamil Nadu	0.5	100	100

*Figure 7. Waste Segregation at source from few cities of India*

## 2.1 Solid Waste Management Plan:-

A Solid Waste Management Rules, 2016, "solid waste" means and includes solid or semi-solid domestic waste, sanitary waste, commercial waste, institutional waste, catering and market waste and other non-residential wastes, street sweepings, silt removed or collected from the surface drains, horticulture waste, agriculture and dairy waste, treated bio-medical waste excluding industrial waste, bio-medical waste and e-waste, battery waste, radio-active waste generated in the area under the local authorities and other entities.. There are separate rules for e- waste which would be discussed separately in this document.

Ministry of Environment, Forest and Climate Change (MoEF&CC) has notified the Solid Waste Management Rules 2016. As per the rules, the role of local body has been specified as section 15.

### 2.1.1 Solid Waste Management in Bokaro Steel City:-

**Keeping the provisions of CPCB (section 8.1.1 of the document elicits the details) in mind the following format of collected data gives a comprehensive review:-**

- 1.Total waste generation is around 85 MT/day inside jurisdiction are of Bokaro Steel City
2. Door to Door collection according to survey is 100 percent.
3. Waste segregation is partial.
4. There is no separate disposal of segregated waste.
5. Present dumpsite is located inside the town at every turning of the city for the quarters located in every sector. The main and major dumpsite of the city is located at the exterior of sector 11.

No of Ward	Population	Waste Generation per day	No of Dumping Vehicle
10 Sectors	2 Lakhs as per 2011 census	85 to 90 MT	Trolleys- 157 Compactor Loder-02 and Dumpler Placer- 01

Tabulation of activities with objective, status, responsible functionary and timeline is as below:-

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Responsive solid &amp; wet waste segregation and Collection</b>	To create the facility of solid and wet waste collection in separate container and dumping it to the nearby area with an arrangement of final dumping site where waste processing could be possible.	Running	General Manager Town Administration, Bokaro Steel Plant	On Going
	To make it mandatory for citizens to segregate solid and wet waste at source. Reasonable and possible monetary support to be asked to the citizens who are availing the door to door collection facility.	Running		On Going
<b>Sustainable Segregation and Collection</b>	To make it possible at large scale daily door to door collection (providing carts with two separate containers for wet and dry waste and one small for sanitary waste)	Running	General Manager Town Administration, Bokaro Steel Plant	On Going
	Providing large 3 dustbins with a capacity of 1000 liters at minimum possible distance and 2 covered bins of 300 liters for commercial & institutional premises.	90%		On Going
	Providing separate storage facility for recyclable and non-recyclable materials.	Partial		1 year
	Spreading awareness about plastic hazards and charging penalty on single plastic use.	Partial		
<b>Domestic Hazardous Waste</b>	To create possible number of disposal points for domestic hazardous waste inside the concerned jurisdiction.	Initiated	General Manager Town Administration, Bokaro Steel Plant	6 months
	Providing the facility of door to door collection of domestic hazardous waste once a fortnight.	Not Initiated		9 months
	Ensuring safe storage and transportation of the domestic hazardous waste to the hazardous waste disposal facility.	No provision		12 months
<b>Planning</b>	Prepare a solid waste management plan	Running	General Manager Town Administration, Bokaro Steel Plant	On Going
	Adopting the concept of composting at all the administrative level.			On Going
	Preparing estimate of budgetary needs			On Going
	Notifying the recyclers of the area.			On Going

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Participation of SHGs/NGOs/Waste Pickers</b>	Inviting women SHGs and/or NGOs for collection and segregation of dry & wet waste.	Not Initiated	DC and General Manager Town Administration, Bokaro Steel Plant.	9 months
	Empowering the waste pickers with health security and authorization.			9 months
<b>Integration of new sanitary landfill</b>	Demarcation of sanitary landfill sites.	Old proposed site didn't get approval	General Manager Town Administration, Bokaro Steel Plant	1 year
	Site preparation on the permission of JSPCB			3 months
	Rehabilitation of old dumpsite	Initiated	General Manager Town Administration, Bokaro Steel Plant	1 year
<b>Waste management awareness</b>	Organizing Awareness Campaign on a regular interval on waste segregation, proper disposal and fines as applicable	Partial	General Manager Town Administration, Bokaro Steel Plant	3 months
<b>Strengthening financial status.</b>	Creating possible platforms of revenue collection(e.g. holding tax, waste collection fee...etc).	Running	General Manager Town Administration, Bokaro Steel Plant	On Going
	Levying Green Tax on all pollution causing units (e.g. vehicles, food units, factories...etc.).			

### 2.1.2 Solid waste management in Chas Municipal Corporation:-

Total waste generation is around 52 MT/day inside jurisdictions are of Chas Municipal Corporation.

1. Door to Door collection according to survey is only partial.
2. Waste segregation is partial.
3. There is no separate disposal of segregated waste.
4. A DPR for solid waste management is under process and expected to be accomplished shortly.
5. A processing unit of solid waste will be constructed under the proposed DPR with an aim to 100 percent door to door segregated waste collection.
6. Waste collection fee to be collected from the citizens availing the facility.
7. Currently waste collection fee is collected by Chas Enviro. Pvt. Ltd.

8. Rehabilitation of an old dumpsite on the bank of Garga River, near DC office has been done by composting in-situ and then converting it into an entertainment park. Some of the old sites have foretasted (e.g. ITI MORE landfill, by SHGs). Near NH-32 at Kamaldih Multipurpose Building and Municipal Corp. office are under construction.
9. Present dumpsite as well as processing unit is proposed at Kalapatthar in an area of 10 acres.

No of Ward	Population	Waste Generation per day	No of Dumping Vehicle	Employees (Safai Mitra)
35	141640 as per 2011 census	52 MT	Garbage Loader-1 JCB-1 Dumfar-1	Safai Mitra-70 Safai Mitra-228 (Sweeper)

Tabulation of activities with objective, status, responsible functionary and timeline is as below:-

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time After approval of DEP
<b>Responsive solid &amp; wet waste segregation and Collection</b>	To create the facility of solid and wet waste collection in separate container and dumping it to the nearby area with an arrangement of final dumping site where waste processing could be possible.	Partial	Additional Municipal Commissioner/ Mayor Chas Nagar Nigam	3 months
	To make it mandatory for citizens to segregate solid and wet waste at source. Reasonable and possible monetary support to be asked to the citizens who are availing the door to door collection facility.	Initiated		1 year
<b>Sustainable Segregation and Collection</b>	To make it possible at large scale daily door to door collection (providing carts with two separate containers for wet and dry waste and one small for sanitary waste)	60%	Additional Municipal Commissioner / Mayor Chas Nagar Nigam	6 months
	Providing large 3 dustbins with a capacity of 1000 liters at minimum possible distance and 2 covered bins of 300 liters for commercial & institutional premises.	Partial		1 year
	Providing separate storage facility for recyclable and non-recyclable materials.	Partial		1 year
	Spreading awareness about plastic hazards and charging penalty on single plastic use.	Initiated		6 months

<b>Domestic Hazardous Waste</b>	To create possible number of disposal points for domestic hazardous waste inside the concerned jurisdiction.	Initiated	Additional Municipal Commissioner / Mayor Chas Nagar Nigam	6 months
	Providing the facility of door to door collection of domestic hazardous waste once a fortnight.	Not Initiated		9 months
	Ensuring safe storage and transportation of the domestic hazardous waste to the hazardous waste disposal facility.	No provision		12 months
<b>Planning</b>	Prepare a solid waste management plan (See Reference 3)	Not Initiated	DC, Additional Municipal Commissioner / Mayor Chas Nagar Nigam	9 months
	Adopting the concept of composting at all the administrative level.			9 months
	Preparing estimate of budgetary needs			9 months
	Notifying the recyclers of the area.			6 months

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Participation of SHGs/NGOs/Waste Pickers</b>	Inviting women SHGs and/or NGOs for collection and segregation of dry & wet waste.	Initiated	DC, Additional Municipal Commissioner/ Mayor Chas Nagar Nigam	9 months
	Empowering the waste pickers with health security and authorization.			9 months
<b>Integration of new sanitary landfill</b>	Demarcation of sanitary landfill sites.	Proposed	DC, Additional Municipal Commissioner/ Mayor Chas Nagar Nigam, and RO, JSPCB	1 year
	Site preparation on the permission of JSPCB			3 months
	Rehabilitation of old dumpsite	Functioning	DC, Ex Officer (NP), DFO	On Going
<b>Waste management awareness</b>	Organizing Awareness Campaign on a regular interval on waste segregation, proper disposal and fines as applicable	Initiated	DC, Additional Municipal Commissioner/ Mayor Chas Nagar Nigam	3 months
<b>Strengthening financial status.</b>	Creating possible platforms of revenue collection (e.g. holding tax, waste collection fee...etc.).	Running	Additional Municipal Commissioner/ Mayor Chas Nagar Nigam	On Going
	Levying Green Tax on all pollution causing units (e.g. vehicles, food units, factories...etc.).			

### 2.1.3 Solid waste management in Phusro Nagar Parishad:-

1. Total waste generation is around 15 MT/day inside jurisdiction is of Phusro Nagar Parishad.
2. Door to Door collection according to survey is only partial.
3. Waste segregation is zero.
4. There is no separate disposal of segregated waste.
5. Under Swachhha Bharat Mission solid waste management work has been tendered to Ms.Cube Bio-Energy Pvt. Ltd. which is to be started shortly.

No of Ward	Population	Waste Generation per day	No of Dumping Vehicle
28 wards	89178 as per 2011 census	15 MT	Trolleys- 04 Mini Truck- 16 Truck- 01

Tabulation of activities with objective, status, responsible functionary and timeline is as below:-

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Responsive solid &amp; wet waste segregation and Collection</b>	To create the facility of solid and wet waste collection in separate container and dumping it to the nearby area with an arrangement of final dumping site where waste processing could be possible.	Partial	Executive Officer / Chairman, Nagar Parishad	3 months
	To make it mandatory for citizens to segregate solid and wet waste at source. Reasonable and possible monetary support to be asked to the citizens who are availing the door to door collection facility.	Initiated		1 year
<b>Sustainable Segregation and Collection</b>	To make it possible at large scale daily door to door collection (providing carts with two separate containers for wet and dry waste and one small for sanitary waste)	Partial	Executive Officer / Chairman, Nagar Parishad	9 months
	Providing large 3 dustbins with a capacity of 1000 liters at minimum possible distance and 2 covered bins of 300 liters for commercial & institutional premises.	Partial		1 year
	Providing separate storage facility for recyclable and non-recyclable materials.	Not Initiated		1 year
	Spreading awareness about plastic hazards and charging penalty on single plastic use.	Not Initiated		9 months

<b>Domestic Hazardous Waste</b>	To create possible number of disposal points for domestic hazardous waste inside the concerned jurisdiction.	Not Initiated	Executive Officer / Chairman, Nagar Parishad	6 months
	Providing the facility of door to door collection of domestic hazardous waste once a fortnight.	Not Initiated		9 months
	Ensuring safe storage and transportation of the domestic hazardous waste to the hazardous waste disposal facility.	Not Initiated		12 months
<b>Planning</b>	Prepare a solid waste management plan (See Reference 3)	Not Initiated	DC, DDC and Executive Officer, Nagar Parishad	9 months
	Adopting the concept of composting at all the administrative level.			9 months
	Preparing estimate of budgetary needs			9 months
	Notifying the recyclers of the area.			6 months

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Participation of SHGs/NGOs/ Waste Pickers</b>	Inviting women SHGs and/or NGOs for collection and segregation of dry & wet waste.	Not Initiated	DC, Executive Officer / Chairman, Nagar Parishad	9 months
	Empowering the waste pickers with health security and authorization.			9 months
<b>Integration of new sanitary landfill</b>	Demarcation of sanitary landfill sites.	Proposed	DC, Executive Officer / Chairman, Nagar Parishad, and RO, JSPCB	1 year
	Site preparation on the permission of JSPCB			3 months
	Rehabilitation of old dumpsite.	Not Initiated	DC, Ex Officer (NP), DFO	On Going
<b>Waste management awareness</b>	Organizing Awareness Campaign on a regular interval on waste segregation, proper disposal and fines as applicable	Partial	DC, Executive Officer / Chairman, Nagar Parishad	3 months
<b>Strengthen in financial status.</b>	Creating possible platforms of revenue collection (e.g. holding tax, waste collection fee...etc).	New	DC, Executive Officer/ Chairman, Nagar Parishad	Policy Decision
	Levying Green Tax on all pollution causing units (e.g. vehicles, food units, factories...etc).			

**Further observations across the Bokaro urban center suggest the following:-**

1. There is an awareness spreading (program run by World Green Line) among the citizens about segregation of waste.
2. The facility to encourage them to segregate waste is provided at a small possible scale by WGL. E.g. Disposal points having disposal containers for wet and dry waste.
3. Collection infrastructure mainly consists of tractor driven trolley and there is no infrastructure and system to collect and dispose the segregated waste.

## 2.1.4. Proposed step wise Waste Management in Urban Area:

### - Step 1: Five Way Home Waste Segregation System :-

### Step 2: Three way system of waste collection:-

1. Door to Door Waste Collection

2. Waste Collection from Dumpsites

3. Transportation from Dumpsite to segregation point or sanitary landfill

**Step 3: Dry waste to Material Recovery Facility and Wet Waste to On-Site Composting:-**

**Step 4: Composting of Wet Waste at yard site:-**

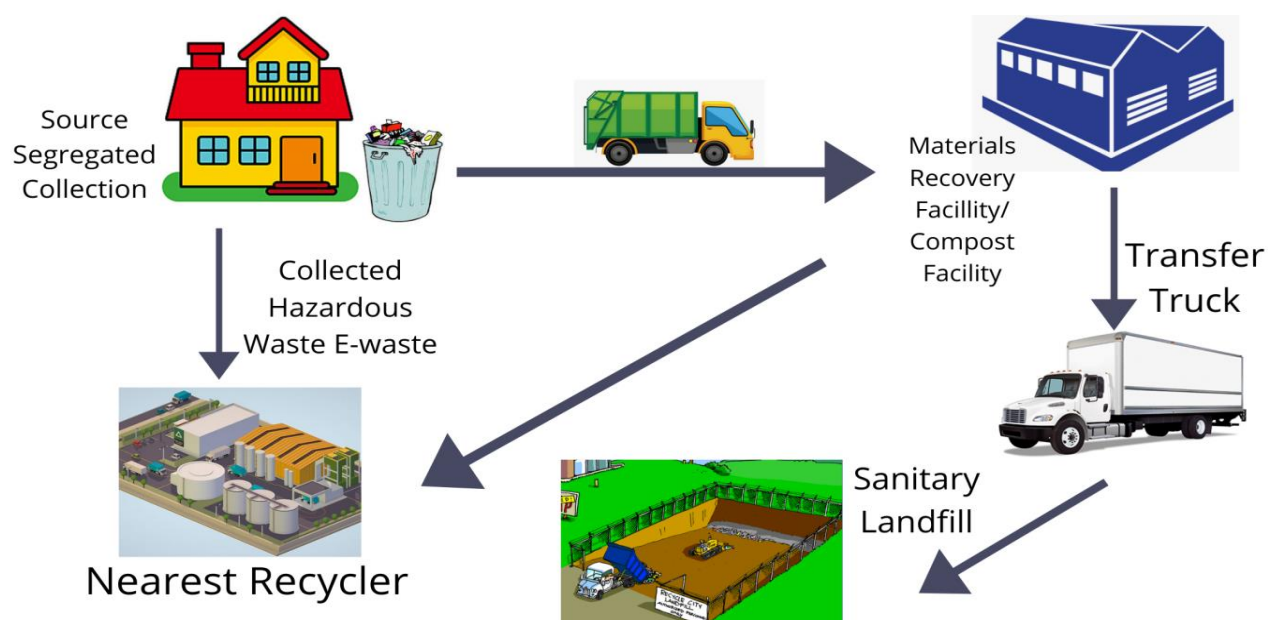

## A wide-angle photograph of a large-scale waste management site. In the foreground, a rectangular area is lined with black plastic, possibly for leachate collection. The surrounding ground is covered in a thick layer of brown soil and scattered debris, including plastic bags and other waste. In the background, a massive, sprawling pile of garbage rises, extending towards the horizon. The sky is filled with white clouds, and distant hills are visible on the horizon.

The diagram illustrates the hazardous waste management process in three stages:

- Storage:** A red drum with a biohazard symbol and the word "BIOHAZARD" is shown on the left.
- Transportation:** A green arrow points from the drum to a white semi-truck. Above the truck, the text "HAZARDOUS WASTE TRANSPORTATION" is written in red.
- Landfilling:** A green arrow points from the truck to a cross-section diagram of a hazardous waste landfill. The diagram is titled "Hazardous Waste Landfill" and shows multiple layers: Clay cap, Gas vent, Topsoil, Earth, Sand, Plastic cover, Superabsorbent clay cap, Leak detection system, Reaction monitor in drainage, Groundwater monitoring well, Plastic double liner, Double liner, and Clay liner. Labels on the left side of the diagram include Clay cap, GB waste, Leachate, Earth, and Clay liner.

### Waste Segregation and Management in Urban as depicted in the flow diagram:-

*Figure 8. Suggested Flow of Solid Waste in Urban Area*

#### 2.1.5. Waste Management at Block and Village Level:-

India is the country of villages. Most population dwells in the villages. Though the population density is less than urban area yet waste generation is a by-product of lifestyle. Villages contribute almost 85% of the whole population. When it comes to Bokaro district, its population is 21 lakh (accord to 2011 census). Its villages contribute almost 10 lakh of its total population which evidently generate a huge waste and needs to have proper plan for waste management. Hence,

##### **The Plan is formulated on the following standard:-**

1. Each village should have a properly demarcated place for both dry & wet solid waste disposal.
2. Every Panchayat Samiti should appoint **waste management committee** a collection cart, which is support to look after the matter related management of the disposal sites.
3. A composting unit to make compost of possible waste and use it as fertilizer should be there in every village.
4. Prohibition of incineration of waste must be there.
5. Each block should have a properly demarcated place for both dry & wet solid waste disposal where each Gram Panchayat can deposit their dry waste.
6. Segregation of recyclable materials should be practiced by the Panchayat Samitis and as per the quantity of the waste each village (GP) should be paid.
7. Non-recyclable waste should be transported to micro sanitary land fill site by the Panchayat Samitis.

8. The collected recyclable waste from each village should finally be transported to Bokaro district recyclable waste collection point by the Panchayat Samitis and for this Panchayat Samitis should be paid the applicable rate.

*Figure 9. Suggested Flow of Solid Waste at Village, Panchayat and Block Level*

**Approach towards Solid Waste Management in Bokaro District, considering the above are as follows:-**

1. 100% segregation at source
2. 100% segregation while collection or at disposal points (No mixing of dry and wet waste)
3. Creating a culture of segregation of household waste at source.
4. Fee collection from each household for collection of segregated garbage from each household. Eg. Rs 50-110/household (to be deposited along with holding tax or separately)
5. 100% composting of wet waste. This will be done centralized in urban areas and distributed micro composting, at Village and Block level.
6. Involving SHGs/NGOs for segregation of recyclable waste and thus providing employment.

Switching to modified Padupanambur Dakshina Kannada district Zero Waste Model.

7. Rehabilitation of an old dumpsite on the bank of Garga River, near DC office has been done by composting in-situ and then converting it into an entertainment park. Some of the old sites have foretasted (e.g. ITI MORE landfill, by SHGs). And some are projected to be rehabilitated.

**Ideas need to be adopted under the provisions by making by-laws are as follows:-**

1. Continuous awareness program
2. Separate bin for plastic segregation.
3. Segregation at source ought to be mandatory.
4. Penalty on single plastic use.
5. Segregated collection of wet and dry waste from door to door on minimal fee.
6. Penalty levied on burning waste.

Tabulation of activities with objective, status, responsible functionary and timeline is as below:-

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Administration</b>	Every GP should appoint a waste management committee a collection cart, which is support to look after the matter related management of the disposal sites.	Not Initiated	Panchayat Sachiv and Mukhiya	6 months
<b>Segregation</b>	Each village should have a properly demarcated place for both dry & wet solid waste disposal.	Not Initiated	CO, DDC and Ward Members	9 months
<b>Collection</b>	Collection and transportation (to block level collection point) of dry waste should be done by Each Gram Panchayat.	Not Initiated	BDO and Mukhiya	12 months
<b>Conceptual isolation of dry waste.</b>	An isolation center for dry waste at block level should be set up by Pachayat Samiti.	Not initiated	DDC, BDO, CO and Pramukh	3 months
<b>Non-recyclable waste &amp; Landfill</b>	Non-recyclable waste should be transported to specifically demarcated micro sanitary land fill site by the Panchayat Samitis			12 months
<b>Awareness</b>	Gram Sabha should be organized with possible gears (i.e. posters, hoardings, handbills...etc.) specifically to promote the segregation of dry & wet waste.	Partial		6 months
<b>Budgeting for Block level</b>	Proper estimation and budget preparation for waste management activities year wise budget requirement.	Not initiated	BDO and Executive Officer, Panchayat Samiti	6 months

## 2.2. Plastic Waste Management Plan:-

It is mandatory to conceptualize the segregation, separation and minimization of recyclable and non-recyclable plastic at the source and sending the recyclable materials to the recyclers in compliance with Plastic Waste Management Rule 2016, notified by MoEF&CC.

Keeping the same in mind Government of Jharkhand has also imposed complete ban on manufacture, import, export, use & sale of plastic carry bags vide notification no. 3900, dated 15.09.2017.

Though the major producer of plastic waste in Bokaro district is Bokaro Steel City. Sub major producers are Chas Municipal Corp. and Phusro Nagar Parishad. The least producers include all the villages lying in the district. Yet the plastic wastes need to be collected from all the administrative areas.

**Tabulation of activities with objective, status, responsible functionary and timeline of Bokaro Steel City as below:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
Segregation and Disposal	Arrangement of disposal as secondary storage or material recovery facility with sufficient space for recyclable and non-recyclable plastic components.	Initiated	Town Administration, BSL	6 months
	In compliance with the guideline issued by the CPCB, it is important to fix the processing and disposal of non-recyclable fraction of plastic waste.			
Stepwise processing of collected waste	Handing over the recyclable plastic to nearest authorized plastic recycler		Town Administration, BSL	18 months
	The concerned department should encourage the construction agencies for using non-recyclable plastic waste in their construction (e.g. roads).			
Administrative Inspections	Penalty with notice should be levied on single plastic use.	Not Initiated	Town Administration, BSL	9 months
	Sudden and unscheduled but at an interval, an inspection must be done to keep the by- laws and Gov. of Jharkhand ban in check.	Low Frequency	SDM, DSP, CO Town Administration, BSL	Continuous Process

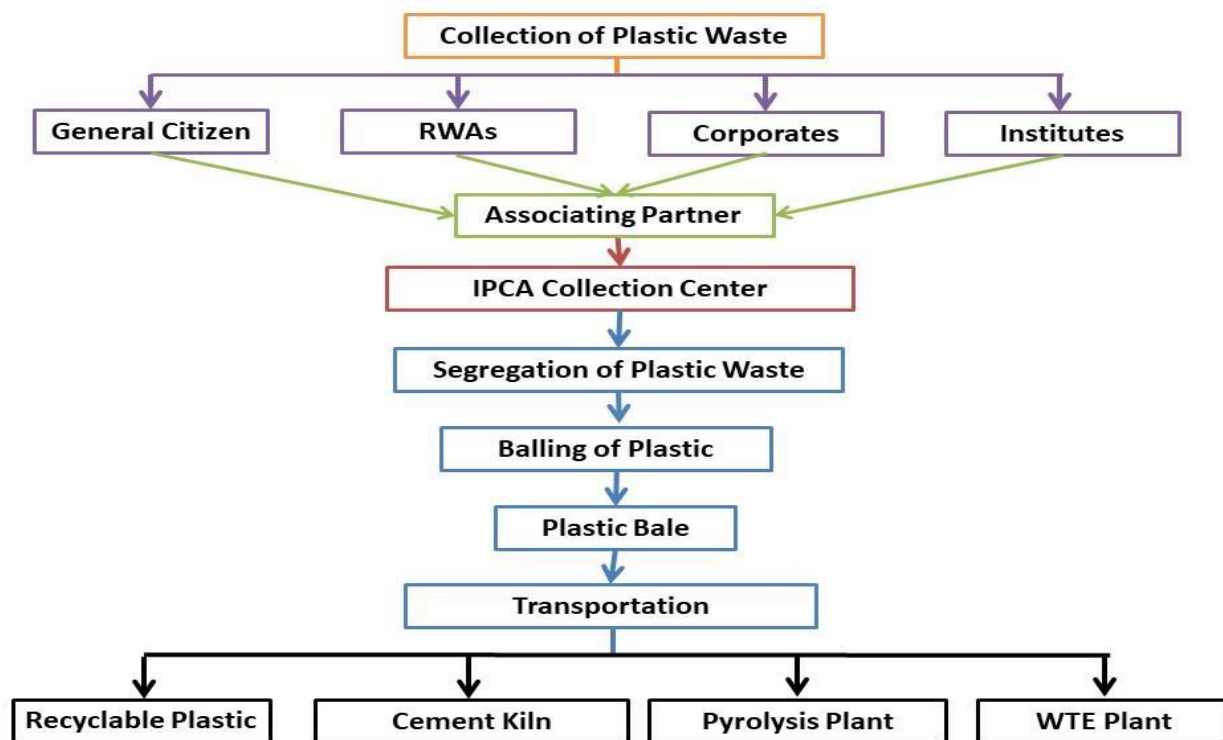

Teachings And Awareness by District Administration	At a regular interval jute bags use and giving up of single plastic use awareness program must be organized.	Partial	Town Administration, BSL	Continuous Process
	Educating the population about harmful effect of plastic and encourage them to give up the use of plastic material.	Partial	DC, SP, DFO and Town Administration, BSL	3 months

**Tabulation of activities with objective, status, responsible functionary and timeline of Chas Municipal Corporation as bellow:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Segregation and Disposal</b>	Arrangement of disposal as secondary storage or material recovery facility with sufficient space for recyclable and non-recyclable plastic components.	Partial	DC and Additional Municipal Commissioner/ mayor CMC	12 months
	In compliance with the guideline issued by the CPCB, it is important to fix the processing and disposal of non-recyclable fraction of plastic waste.			
<b>Stepwise processing of collected waste</b>	Handing over the recyclable plastic to nearest authorized plastic recycler		Superintendent Engineer, PWD	18 months
	The concerned department should encourage the construction agencies for using non-recyclable plastic waste in their construction (e.g. roads).			
<b>Administrative Inspections</b>	Penalty with notice should be levied on single plastic use.	Partial	AMC, Chas Municipal Corporation	9 months
	Sudden and unscheduled but at an interval, an inspection must be done to keep the by- laws and Gov. of Jharkhand ban in check.	Low Frequency	SDM, DSP, CO AMC, Chas Municipal Corporation	Continuous Process
<b>Teachings And Awareness by District Administration</b>	At a regular interval jute bags use and giving up of single plastic use awareness program must be organized.	Partial	DEO, IPRD and Additional Municipal Commissioner, CMC	Continuous Process
	Educating the population about harmful effect of plastic and encourage them to give up the use of plastic material.	Partial	DC, SP, DFO and Additional Chas, Municipal Commissioner	3 months

**Tabulation of activities with objective, status, responsible functionary and timeline of Phusro Nagar Parishad as below:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Segregation and Disposal</b>	Arrangement of disposal as secondary storage or material recovery facility with sufficient space for recyclable and non-recyclable plastic components.	Not Initiated	DC and Executive Officer, Phusro Nagar Parishad	12 months
	In compliance with the guideline issued by the CPCB, it is important to fix the processing and disposal of non-recyclable fraction of plastic waste.			
<b>Stepwise processing of collected waste</b>	Handing over the recyclable plastic to nearest authorized plastic recycler		Superintendent Engineer, PWD	18 months
	The concerned department should encourage the construction agencies for using non-recyclable plastic waste in their construction (e.g. roads).			
<b>Administrative Inspections</b>	Penalty with notice should be levied on single plastic use.	Partial	Executive Officer, Phusro Nagar Parishad	9 months
	Sudden and unscheduled but at an interval, an inspection must be done to keep the by-laws and Gov. of Jharkhand ban in check.	Low Frequency	SDM, DSP, CO and Executive Officer, Phusro Nagar Parishad	Continuous Process
<b>Teachings And Awareness by District Administration</b>	At a regular interval jute bags use and giving up of single plastic use awareness program must be organized.	Partial	DEO, IPRD and Executive Officer, Phusro Nagar Parishad	Continuous Process
	Educating the population about harmful effect of plastic and encourage them to give up the use of plastic material.	Partial	DC, SP, DFO and all other Departmental Heads	3 months

*Fig. 10 Suggested Flow Chart of Plastic Waste at Urban Area*

## 2.3 Biomedical Waste Management Plan:-

### Biomedical waste: -

Biomedical waste is a broader term applied to waste generated in the diagnosis, treatment or immunization of humans, in research or in the production and testing of biological products. It also includes the waste coming out of medical treatment given at health camps

### Infectious waste: -

Infectious waste includes all healthcare/ clinical waste which has the potential to transmit viral, bacterial, fungal or parasitic disease. It includes human waste, waste generated in laboratories practice. Hazardous waste is any waste with a potential to pose a threat to human health and life. Infectious waste is a part of hazardous waste.

Any waste contaminated with blood, body fluids, excretions and secretions is potentially infectious. One of the most hazardous waste is contaminated sharp waste which is a part of infectious waste and can also cause injury. The most common documented transmission of infection from waste to HCWs is through contaminated needles. Laboratory waste is a major potential reservoir of pathogenic microorganisms and requires appropriate handling.

## **National Rules for biomedical waste management:-**

The Ministry of Environment, Forest and Climate Change published the Biomedical Waste Management Rules on 28 March 2016. These rules superseded the Biomedical Waste (Management and Handling) Rules, 1998. The 2016 Rules have been amended in 2018 and 2019. These Rules apply to all persons who generate, collect, receive, store, transport, treat, dispose, or handle biomedical waste in any form including hospitals, nursing homes, clinics, dispensaries, pathological laboratories, blood banks, Ayush hospitals, clinical establishments, research or educational institutions, health camps, medical or surgical camps, vaccination camps, blood donation camps, first-aid rooms of schools, forensic laboratories and research laboratories. Safe and proper identification, handling, storage, and disposal of biomedical waste from laboratories and related facilities is the responsibility of every occupier. "Occupier" means a person having administrative control over the institution and the premises generating biomedical waste, which includes a hospital, nursing home, clinic, dispensary, pathological laboratory, blood bank, HCF and clinical establishment, irrespective of their system of medicine and by whatever name they are called. Duties of the occupier/HCF.

## **Waste segregation at point of generation:-**

HCF/ laboratory waste requires management at every step from generation, segregation, collection, transportation, storage, and treatment to final disposal. Of the waste generated in healthcare settings, approximately 10% to 25% is hazardous but if not segregated properly, the entire waste becomes infectious thereby escalating the overall cost of waste management. The most practical approach to the management of biomedical waste is to identify and segregate infectious waste, which would in turn drastically reduce the cost of waste disposal in healthcare settings. Biomedical waste should be segregated into containers or bags at the point of generation in accordance with. This includes placing different types of waste in different color -coded-bags and containers at the site of generation. Proper segregation should identify waste according to type of waste and type of disposal/ disinfection. Color-coded bags as per national norms need to be placed in appropriate containers with the appropriate label/ logo. For example, using a biohazard symbol for infectious waste Puncture-proof containers made of plastic or metal with a biohazard symbol, in blood collection areas, injection trolleys, nursing stations and OTs should be made available for collecting metallic wastes. Syringes should be either mutilated or needles should be cut and/ or stored in tamper-proof, leak-proof and puncture-proof containers for sharps storage. Ensuring segregation of liquid chemical waste at source and ensure pretreatment or neutralization before mixing with other effluent generated from HCFs.

**BIOHAZARD SYMBOL**

**CYTOTOXIC HAZARD SYMBOL**

## **Collection bags:-**

Solid waste is collected in leak-resistant heavy-duty bags. Colored bags made of non-chlorinated plastic with biohazard sign and labels mentioning date and details of waste are to be used. The bags are tied tightly after they are three-fourths full.

Pre-treatment, packing, storage and transport:- Laboratory waste, microbiological waste, blood samples and blood bags must be pre-treated through disinfection or sterilization on site in the manner as prescribed by the WHO guidelines on safe management of wastes from healthcare activities and then sent to a common biomedical waste treatment facility for final disposal. Standards for autoclaving are as given in Schedule II of the Biomedical Waste Management Rules 2016. The bags or containers used for waste segregation shall be labeled as per the Rule. Provision must be made within the premises of an HCF for a safe, ventilated and secured location for storage of segregated biomedical waste in colored bags or containers, inaccessible to scavengers and protected against insects, birds, animals and rain, to ensure that there is no secondary handling, pilferage of recyclables, or inadvertent scattering or spillage by animals. The biomedical waste from such places or premises should be directly transported to the authorized common biomedical waste treatment facility for the appropriate treatment and disposal. Transport of biomedical waste to common biomedical waste treatment facility will be done only in vehicles having appropriate label as provided in Schedule.

## **Treatment and disposal:-**

The HCF hand over segregated waste as per Schedule to the common biomedical waste treatment facility for treatment, processing and final disposal provided that the laboratory and highly infectious biomedical waste generated shall be pre-treated by equipment such as autoclave or microwave. The HCF shall treat and dispose the biomedical waste in accordance with Schedule), and in compliance with the standards provided in Schedule II of the Biomedical Waste Management Rules 2016. On-site biomedical waste treatment and disposal facility M/s. Biogenetic Laboratory Pvt. Ltd., Chotapichri, Kalyanpur, Dhanbad, Jharkhand are established common biomedical waste treatment facility is available within a distance of 35 km from Bokaro H.Q.

The duties of the common biomedical waste treatment facilities are given in Annex I.

Duties of the M/s. Biogenetic Laboratory Pvt. Ltd., Chotapichri, Kalyanpur, Dhanbad, Jharkhand:-

## **Annex I.**

1. Take all necessary steps to ensure that the biomedical waste collected from the occupier is transported, handled, stored, treated and disposed of, without any adverse effect to the human health and the environment, in accordance with these rules and guidelines issued by the Central Government or, as the case may be, the Central Pollution Control Board from time to time.
2. Ensure timely collection of biomedical waste from the occupier as prescribed under these rules.
3. Establish bar coding and global positioning system for handling of biomedical waste in accordance with the guidelines issued by the Central Pollution Control Board by 27 March 2019.
4. Inform the prescribed authority immediately regarding the occupiers which are not handing over the segregated biomedical waste in accordance with these rules.
5. Provide training for all its workers involved in handling of biomedical waste at the time of induction and at least once a year thereafter

6. Assist the occupier in training conducted by them for biomedical waste management. Undertake appropriate medical examination at the time of induction and at least once in a year and immunize all its workers involved in handling of biomedical waste for protection against diseases, including hepatitis B and tetanus, that are likely to be transmitted while handling biomedical waste and maintain the records for the same.
7. Ensure occupational safety of all its workers involved in handling of biomedical waste by providing appropriate and adequate personal protective equipment (PPE).
8. Report major accidents including accidents caused by fire hazards, blasts during handling of biomedical waste and the remedial action taken and the records relevant thereto, (including nil report) in Form I (refer to rules) to the prescribed authority and also along with the annual report. Maintain a log book for each of its treatment equipment according to weight of batch, categories of waste treated; time, date and duration of treatment cycle and total hours of operation.
9. Allow occupier, who are giving waste for treatment to the operator, to see whether the treatment is carried out as per the rules.
10. Shall display details of authorization, treatment, annual report, etc. on its website; after ensuring treatment by autoclaving or microwaving followed by mutilation or shredding, whichever is applicable, the recyclables from the treated biomedical wastes such as plastics and glass, shall be given to recyclers having valid consent or authorization or registration from the respective Jharkhand state Pollution Control Board.
11. Supply non-chlorinated plastic coloured bags to the occupier on chargeable basis, if required.
12. Common biomedical waste treatment facility shall ensure collection of biomedical waste on holidays also.
13. Maintain all record for operation of incineration, hydro or autoclaving for a period of five years.
14. Upgrade existing incinerators to achieve the standards for retention time in secondary chamber and dioxin and furans within two years from the date of this notification.

Biomedical waste handlers Immunize all HCWs and others, involved in handling of biomedical waste for protection against diseases including hepatitis B and tetanus which are likely to be transmitted by handling of biomedical waste, in a manner as prescribed in the National Immunization Policy or the guidelines of the Ministry of Health and Family Welfare issued from time to time. Ensure occupational safety of all HCWs and others involved in handling of biomedical waste by providing appropriate and adequate PPE. Conduct health check-up at the time of induction and at least once in a year for all Health Care HRs and others involved in handling of biomedical waste and maintain their cords for the same.

Annual report Every HCF has to submit an annual report to the prescribed authority in Form- IV every year on or before the 30 June at Civil Surgeon cum Chief Medical officer, office, Bokaro. Training All workers involved in handling of biomedical waste must be provided training at the time of induction and at least once a year thereafter. Records of the training programmes conducted, number of personnel trained and number of personnel who have not undergone any training must be maintained.

According to the rule following comes under purview of Biomedical Waste Management Rules:

- **Hospitals including Ayush Hospitals**
- **Nursing Homes, Clinics**
- **Dispensaries**
- **Veterinary Institutions, Animal Houses**
- **Pathological Laboratories**
- **Blood Banks / Blood Donation Camps**
- **Clinical Establishments**
- **Research or Educational Institutions, Research Labs**
- **Health Camps**
- **Medical or Surgical Camps**
- **Vaccination Camps**
- **First Aid Rooms of Schools**
- **Forensic Laboratories**

**Tabulation of activities with objective, status, responsible functionary and timeline is as below:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Segregation and Record Keeping</b>	Segregation of waste according to Annexure-8.1, of both government and private facilities	Partial	Civil Surgeon, District Veterinary Hospital In charges, Owners of Private Health Facility	3 months
	Make provision within the premises for a safe, ventilated and secured location for storage of segregated biomedical waste in colored bags or containers in the manner as specified in Annexure 8.1, to ensure that there shall be no secondary handling, pilferage of recyclables or inadvertent scattering or spillage by animals and the bio-medical waste from such place or premises shall be directly transported in the manner as prescribed.	Partial		3 months
	Not to give treated bio-medical waste with municipal solid waste	Complied		Immediate
	Provide training to all its health care workers and others, involved in handling of bio medical waste at the time of induction and thereafter at least once every year.	Partial		3 months
	Maintain and update on day to day basis the bio-medical waste management register and display the monthly record on its website according to the bio-medical waste generated in terms of category and color coding	Partial		Immediate
	Establish a process of collection of bio- medical waste from other CHCs every 48 hours, so that they can come to Bokaro for deep burial, if no Common Biomedical Waste Treatment Facility is finalized. To be sent to CBWTF when finalized.	Not Initiated		6 months

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Disposal</b>	Each BMW producer to identify nearest Common Bio-Medical Treatment Facility and send their waste properly segregated and bar coded to them for final disposal.	Running	Civil Surgeon, District Veterinary Hospital In charge, Owners of Private Health Facility	On going
	Establish a Bar- Code System for bags or containers containing bio-medical waste to be sent out of the premises or place for any Purpose	Partial		6 months
	If CBWTF is not within radius of 75kms, on site disposal may be allowed after the facility has taken permission from JSPCB and is following guidelines	NA	Civil Surgeon and RO, JSPCB	NA
	Avoidance of deep burial and switching over to process like autoclave, pyrolysis etc. Government run facilities to present estimates to health department regarding the same.	Partial	Civil Surgeon, Owners of Private Health Facility	3 months
	Maintain all record for operation of incineration, hydro or autoclaving etc. , for a period of five years.	Partial		3 months

## 2.4. Construction and Demolition (C&D) Waste Management Plan as bellow:-

Duties and responsibilities laid out by the Waste Management Rule 2016 in detailed manner to all the stakeholders ranging from waste generators to ULBs to ministries.

However, implementation of these rules has not been to full extent. Best practice in India shows that 80- 90% of C&D waste can be reused after processing in a variety of applications such as landscaping, earth work, soil erosion prevention and other applications such as road tiles etc.

Construction and demolition waste generators of Township are informed about their duties:-

- (i) Regarding the responsibility for collection, segregation of concrete, soil, and others and storages of C&D waste separately.
- (ii) To ensure that other waste does not get mixed with this waste.
- (iii) To ensure that there is no littering or deposition C&D waste so as to prevent obstruction to the traffic or the public or drains.
- (iv) Duties of service provider and their contractors:  
Service providers are asked to remove all C&D waste and clean the area, appropriate storage and collection in a planned manner.
- (v) Appropriate containers for collection of waste and its removal at regular intervals.
- (vi) Collected waste is transported to appropriate site.
- (vii) Keeping track of generation of C&D waste.

After all marking of a place for disposing C&D waste is very important.

**Tabulation of activities with objective, status, responsible functionary and timeline of Bokaro Steel City as below:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Carriage &amp; Disposal</b>	Service providers are asked to remove all C&D waste and clean the area, appropriate storage and collection in a planned manner. Demarcation of deposit site for C&D waste. Collected waste is transported to appropriate site.	Partial	DC and GM, TA, BSL	3 months
	To ensure that other waste does not get mixed with the C&D waste.	Initiated	GM, TA, BSL	Immediate
<b>Penalty &amp; By-law</b>	Keeping track of generation of C&D waste. Passing of by-law, imposing fine for irresponsible disposal of C&D waste	Not initiated		6 months

**Tabulation of activities with objective, status, responsible functionary and timeline of Chas Municipal Corporation as below:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Carriage &amp; Disposal</b>	Service providers are asked to remove all C&D waste and clean the area, appropriate storage and collection in a planned manner. Demarcation of deposit site for C&D waste. Collected waste is transported to appropriate site.	Partial	DC, & AMC, Chas Municipal Corporation	3 months
	To ensure that other waste does not get mixed with this waste.	Initiated	AMC, Chas Municipal Corporation	Immediate
<b>Penalty &amp; By-law</b>	Keeping track of generation of C&D waste. Passing of by-law, imposing fine for irresponsible disposal of C&D waste	Not-initiated		6 months

Tabulation of activities with objective, status, responsible functionary and timeline of Phusro Nagar Parishad as below:-

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Carriage &amp; Disposal</b>	Service providers are asked to remove all C&D waste and clean the area, appropriate storage and collection in a planned manner. Demarcation of deposit site for C&D waste. Collected waste is transported to appropriate site.	Partial	DC and Executive Officer, Phusro Nagar Parishad	3 months
	To ensure that other waste does not get mixed with this waste.	Not Initiated	Executive Officer, Phusro Nagar Parishad	Immediate
<b>Penalty &amp; By-law</b>	Keeping track of generation of C&D waste. Passing of by-law, imposing fine for irresponsible disposal of C&D waste	Not-initiated	Executive Officer, Phusro Nagar Parishad	6 months

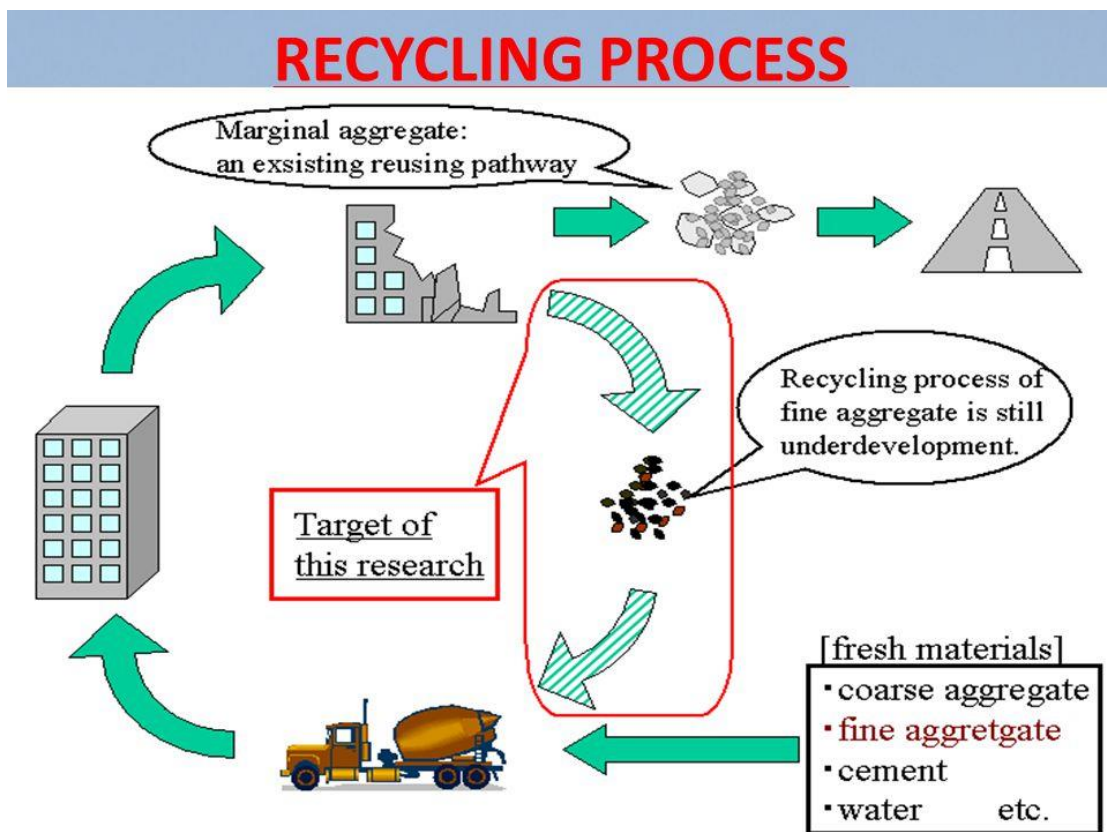

Figure 10. Proposed Construction and demolition waste management in urban area

## 2.5. Hazardous Waste Management Plan:-

The term **Hazardous waste** interprets as “any substance, excluding domestic and radioactive wastes, which causes significant hazards to human health or environment because of its quantity and/or corrosive, reactive, ignitable, toxic and infectious property when improperly treated, stored, transported and disposed.

As per the Hazardous Management Rule 2016, a list of activities (as well as metals in excess of certain concentration and many other compounds classified as hazardous ) that create hazardous waste can be tabulated as follows:-

**Tabulation of activities with objective, status, responsible functionary and time line as below:-**

Activity	Objective	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Disposal &amp; processing of Industrial HW</b>	Storage of HW generated by the industrial units has to be done in an appropriate & safe manner by themselves. HW generating units have to get a registration under JSPCB.	Periodically updated	G.M, DIC and RO, JSPCB	3 months
	Maintaining a track record of all the activities/industrial processes which can create hazardous waste to ensure that they follow Hazardous Waste Rules 2016.			
	There should be authorized disposal or authorized user to buy the hazardous wastes generated whiles the establishment of an industrial unit.	Not-initiated		3 months

**Tabulation of activities with objective, status, responsible functionary and timeline of Bokaro Steel City as below:-**

<b>Processing &amp; Collection of Domestic HW</b>	The administration is supposed to create possible and required number of safe disposal points in its jurisdiction for the disposal of domestic hazardous waste.	Not-initiated	GM, TA Bokaro Steel City	6 months
	To provide the facility of door to door domestic hazardous waste collection once a month.			9 months

**Tabulation of activities with objective, status, responsible functionary and timeline of Chas Municipal Corporation as bellow:-**

<b>Processing &amp; Collection Of domestic HW</b>	The administration is supposed to create possible and required number of safe disposal points in its jurisdiction for the disposal of domestic hazardous waste.	Not-initiated	AMC, Chas Nagar Nigam.	6 months
	To provide the facility of door to door domestic hazardous waste collection once a month.			9 months

**Tabulation of activities with objective, status, responsible functionary and timeline of Phusro Nagar Parishad as below:-**

<b>Processing &amp; Collection Of Domestic HW</b>	The administration is supposed to create possible and required number of safe disposal points in its jurisdiction for the disposal of domestic hazardous waste.	Not-initiated	Executive Officers , Phusro Nagar Parishad	6 months
	To provide the facility of door to door domestic hazardous waste collection once a month.			9 months

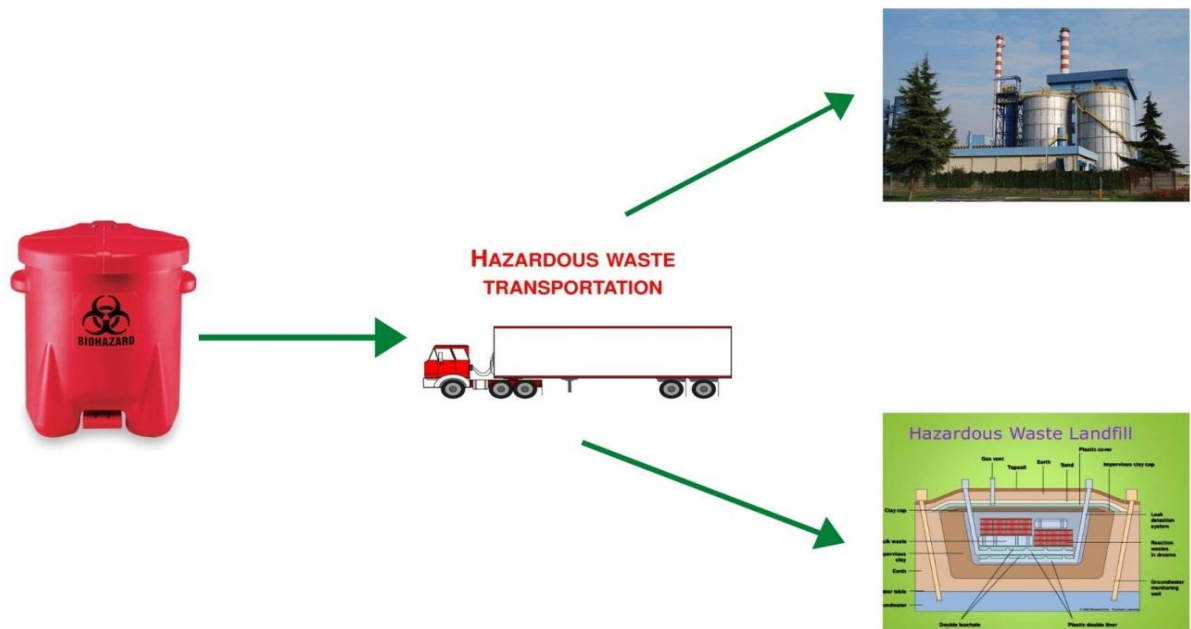

**M/s. Trident Metal Energy Pvt. Ltd., At+PO- Karharia, Dist- Bokaro is nearest recycler.**

**Standard Operating Procedure at SAIL/Bokaro Steel Plant for ensuring Compliance to Hazardous & Other Wastes (Management & Trans boundary Movement) Rules' 2016.**

SAIL/ Bokaro Steel plant has standard practice for management of Hazardous wastes generated at different shops in consonance with Hazardous & Other Wastes (Management & Transboundary Movement) Rules'2016 and amendments thereof. The standard operating procedure is as under:-

- M/s SAIL/ Bokaro Steel Plant is operating with valid Hazardous Waste authorization from Jharkhand state Pollution Control Board. HW Authorization (Ref. No. JSPCB/HO/RNC/HWM-6676084/2020/23, Dated: 29-07-2020) is valid up to 31<sup>st</sup> December2020. Online Application has been submitted to JSPCB for its renewal for next four years.
- The Various Hazardous Wastes generated out of steel making processes have been identified and characterized as per Hazardous & Other Wastes (Management & Trans boundary Movement) Rules'2016.
- The Quantity & type of Hazardous Waste generated & disposed are being maintained by various shops and are submitted to Environment Control Department in form-3. Total Hazardous Waste generated & disposed is compiled on annual basis by ECD.

- Annual return in Form-4 is submitted to board before 30<sup>th</sup> June for the previous fiscal. The Hazardous Waste return for 2019-20 was submitted to JSPCB on 12<sup>th</sup> 2020.
- BSL is following the philosophy off RRR, i.e. Reduce, Reuse, Recycle and Eco-friendly disposal in Secured Land Fill.
- Hazardous Waste manifest System is maintained by stores department for the HW sold to Authorized Recyclers. The copy of the same is submitted to board as & when received from stores.
- The non-usable & non-saleable Hazardous Wastes are dumped in our captive secured land fill.
- In compliance to Honorable Supreme Court order the details of Hazardous Wastes has been displayed at our Main gate.
- All the conditions of HW authorization are complied with. The compliance Report to the conditions of Hazardous Waste authorisation is submitted to the board on regular basis.

*Figure 11: Proposed Construction and demolition waste management in urban area*

## 2.6 E-Waste Management Plan:-

In this highly technological age Electrical and electronic equipment dominate. The matter of fact is that we can't imagine this century without electronics and electrical. Scientifically every electronics and electrical lose the favorable status of use after 3 years. After 3 years of use it becomes a scrap and termed as E-Waste. It includes the components, parts and spares, CPU, Laptops, electrical-typewriters, telex, telephone, cellular phones, printers including cartridges, T.V, LED, Refrigerator, Washing Machine, A.C, fluorescent and mercury containing lamps etc.

Tabulation of activities with objective, status, responsible functionary and timeline as below:-

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Disposal point &amp; collection</b>	Demarcated and identified disposal point within the concerned jurisdiction with proper safety measures (bin cover).	Partial	TA BSL, Chas AMC Chas Nagar Nigam, Executive Officers ,Phusro Nagar Parishad	6 months
	Preparing a record of E-waste collectors and making them publically well known.			6 months
	Inviting and facilitating the agencies to set up their collection Centre in the district.			1 year
<b>Transportation &amp; Recycling</b>	Ensuring transportation of collected E-waste in an interval to the nearest authorized E-Waste recycler for recycling.	Partial	DC GM,TA BSL, AMC, Chas Nagar Nigam, Executive Officers ,Phusro Nagar Parishad	9 months
<b>E-waste awareness program</b>	A wide range awareness program to make common people aware about e-waste as it generated by every individual family.	Not Initiated	DC, GM,TA BSL, AMC Chas Nagar Nigam, Executive Officers , Phusro Nagar Parishad	Immediate
	To make sure that people must not treat e-waste as other general solid waste.			

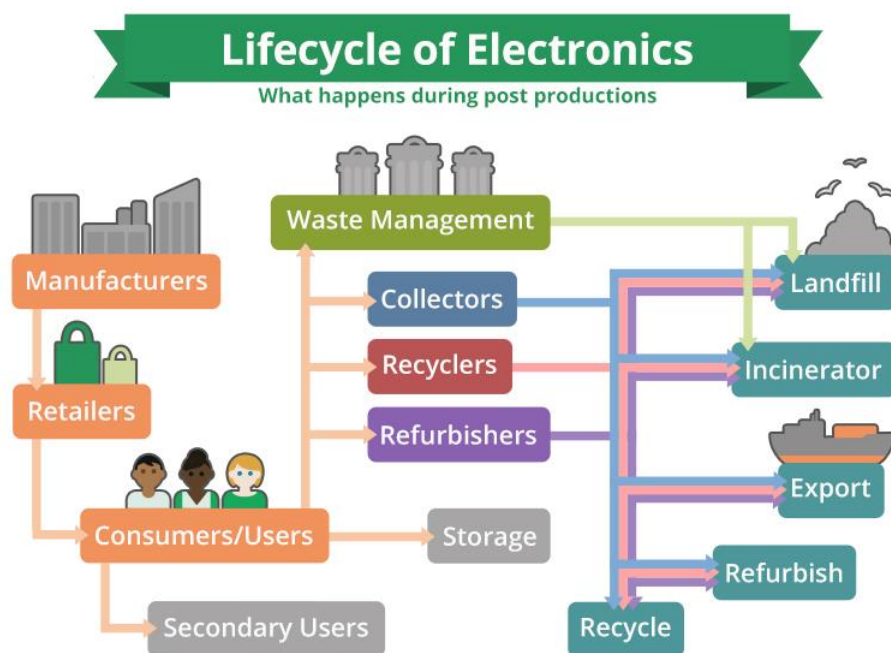

Figure 12. Proposed Cycle of E-waste management.

### 3. Water Resources Management Plan:-

An attitude of ignorance causes waste. Water one of the basic amenities essential for living is misused and thus changes into waste water. This is the major problem that is causing the whole living community suffer. The waste water even contaminates the ground water and breed pathogens, contributes to significant part of population dealing with water borne diseases.

India has rich resources of surface water nevertheless it depends on ground water. Ground water extraction has increased so much in the last two decades. Because of depletion of resources we are at the stage of water crisis in most part of the nation.

Bokaro is in industrial zone and thus the water requirement here is more. The town areas have the facility of supply drinking water facility. Villages do not have proper drinking water facility. For water they totally depend on ground water. Extraction of ground water at such a high level is exhausting the ground water level. Most places directly dump their drainage water into the existing drains which finally leads to the rivers through nalas and pollute the river water.

Waste water can be recycled or reused in many ways which can help fight water crisis to a greater extent along with water harvesting system of rain water.

As per According to a data publish by the Central Ground Water Board's 2017, **1,592 blocks**, identified as “water-stressed”, 313 critical blocks, 1,000-odd over- exploited blocks and 94 blocks with least water availability (for states without water-stressed blocks).

Bokaro district has 57258 no. of water bodies. The number includes **04** lakes, **1631** (GOV) ponds, **55614** Small Ponds (DHOBA), wells, 9 rivers.

#### 3.1.Domestic Sewage Management Plan:-

**Liquid waste flowing through the Sewage** of the district consists of liquid waste generated in residences, industries waste discharge and inflow of rain/flood/storm water.

Hence basically sewage contains three components:

- Sanitary or domestic sewage
- Industrial wastes
- Infiltration, Inflow and storm-water.

## Scenario in Bokaro:-

1. Only few parts of the district (Bokaro Steel City) has proper sewerage system (260 kms.). Rest of the district drastically lacks the sewerage system. Some of the places (Chas Municipal and Phusro Nagar Parishad) have open drainage system. The destination point of most of the sewage and drains is Garga River via depression and nalas.
2. A DPR has been formulated for proper sewerage system and sewerage treatment plant of 20 MLD at Chas Municipal Corp and project of 196.41crore has been sanctioned by Phusro Municipality.  
Most of the household in the district have backyard sump as way of disposal of domestic waste water (grey water).
3. No part of liquid waste is treated

### Considering above, the proposals for management of waste water are:

1. Bokaro district lacks centralized sewerage system and not advisable at this juncture as well.
2. Rather, **decentralized sewerage system for each ward**, should be attempted for managing the grey water.
3. Chas Municipal Corp. is under process to formulate STP of 20MLD capacity.

Decentralized sewerage system is the collection, treatment, disposal / reuse of sewage from individual homes, clusters of homes, isolated communities or institutional facilities, as well as from portions of existing communities at or near the point of waste generation.

4. Chas Municipal Corp. is under process to formulate project about 196.41 crore.

Decentralized sewerage system is the collection, treatment, disposal / reuse of sewage from individual homes, clusters of homes, isolated communities or institutional facilities, as well as from portions of existing communities at or near the point of waste generation.

The decentralization concepts and technologies in sewerage management of grey water need to be systematically investigated, with focus on its development and practical implementation in Bokaro. It may be borne in mind that the approach adopted for decentralized sewage management system (DSMS) is area specific and governed by number of issues and conditions prevailing, and also the methodology adopted and is influenced by:-

- (i) Technical aspects
- (ii) Financial aspects,
- (iii) Social aspects,
- (iv) Environmental aspects, and
- (v) Legal aspects.

Hence, the district administration needs to plan it properly. One can take up one habitation of 60-100 households respectively and plan implementation of DSMS of 1-2 MLD capacity.

One example of Decentralized Wastewater Treatment System with treatment sequence is given below:

Figure 12. Schematic process flow diagram of DSMS

Tabulation of activities with objective, status, responsible functionary and timeline of Bokaro Steel City as bellow:-

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
Formulation	Preparation and submission of the map of existing sewerage network and their outlet points in Bokaro Steel City to District Environment Committee.	Running	GM, TA, BSL,	1 Month
	(a) DPR preparation for development of sewerage and treatment system of domestic sewage and estimation of capacity of STP needed.	Old is Running & Modern Projected		On Going
	(b) Development of DPR for Decentralized Waste Water Collection and Treatment System (DWWCTS) - Sector WISE for in the Bokaro Steel City.	Running		On Going
Installation of sewerage network and STP	Placement and initiation of first unit of DWWCTS in one of the Sector of Bokaro Steel City.	Old is Running & modern Projected	GM,TA, Bokaro Steel City.	1.5 years
	Making of STP at Bokaro Steel City.		GM,TA, Bokaro Steel City.	1 years
	Installation of separate Effluent Treatment plant for sewage from DMCH		Civil Surgeon&	1 year
By-Laws	Making it mandatory in by law for complete ban on flow of grey water from households to water bodies like river, lakes and ponds.	Initiated	GM,TA, Bokaro Steel City.	1.5 years
	A compulsory backyard sump for household snot connected to sewerage system.			ASAP

Tabulation of activities with objective, status, responsible functionary and timeline of Bokaro Steel City as bellow:-

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
Formulation	Preparation and submission of the map of existing sewerage network and their outlet points in Bokaro Steel City to District Environment Committee.	Running	GM, TA, BSL,	1 Month

	Making of STP at Phusro Nagar Parishad.		Executive Officer, Phusro Nagar Parishad	1 years
	Installation of separate Effluent Treatment plant for sewage from DMCH		Civil Surgeon	1 year
<b>By-Laws</b>	Making it mandatory in by law for complete ban on flow of grey water from households to water bodies like river, lakes and ponds.	Initiated	Executive Officer, Phusro Nagar Parishad	1.5 years
	A compulsory backyard sump for households not connected to sewerage system.			ASAP

### 3.2. Industrial Wastewater Management Plan:-

Water is one of the most important factors of industrial settlement. Without water we cannot impart an industry. Same time industry's discharge mixes with water and pollutes it. Thus the water is termed as industrial waste water. If we take it at national level its quantity is tremendously huge as India is at the stage of industrialization.

Bokaro is an industrial zone of the country. Here Asia's largest steel plant (SAIL BOKARO) is located. Other than that some more industries (ELECTRO Steel, JIADA, JP Cement ...et.) are there. Hence generation of waste water is evident and needs **Industrial Waste Water Management Plan.**

### 3.3. Polluted Rivers Extending In Bokaro:-

According to the guidelines issued by the Hon'ble NGT in its order dated 20.09.2018 in O.A No. 673/2018, CPCB has classified the polluted river stretches in five priority categories i.e., I, II, III, IV, V depending upon the level of BOD.

- Criteria for Priority I - BOD greater than or equal to 30mg/L
- Criteria for Priority II - BOD between 20-30mg/L.
- Criteria for Priority III - BOD between 10-20mg/L.
- Criteria for Priority IV - BOD between 6-10mg/L.
- Criteria for Priority V - BOD between 3-6mg/L.

Seven river stretches have been identified in Priority IV & V as polluted stretches in Jharkhand.

Sl. No.	River	River Stretch	Approx. Length Of The Stretch (Km)	District
1	Garga	Along Telmuchu	22	Bokaro
2	Sankh	Kongserabasar To Bolba	10	Simdega
3	Subarnarekha	Hatia Dam To Jamshedpur	120	Ranchi, Khunti, Seraikela Kharsawan & East Singhbhum
4	Damodar	Phusro Road Bdg To Turio	12	Bokaro
5	Jumar	Kanke Dam To Kadal	10	Ranchi
6	Konar	Along Tilaya And Konar	-	Koderma & Hazaribagh
7	Nalkari	Along Patraru	-	Ramgarh

According to the above table the river “Garga” (flowing through only Bokaro district) is the most polluted and endangered river that mandatorily needs to be monitored and for this Chas Municipal Corp. has submitted a plan emphasizing the expedition to make ‘Garga’ pollution free. The plan also consists of making of DPR for constructing sewerage with treatment plant of 20MLD capacity.

The district enjoys the inflow of 09 rivers. Out of which most are under the risk of disappearance. Some major rivers we could take a glance of are:-

**Damodar:-** The river has been revitalized by restricting the disposal of ashes from **THERMAL PLANTS**. Tributaries of Damodar river are affected by idol immersion and plastic wastes. It is projected to keep a proper vigilance after the DEP gets approval.

**Tabulation of activities with objective, status, responsible functionary and timeline as below:-**

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Cleaning &amp; Mandatory Monitoring of Rivers</b>	A planned expedition to clean ‘Garga’ river and appointing a committee to monitor the health of the rivers half yearly.	Initiated (DPR Submitted to Gov. of Jharkhand For constructing sewerage & treatment plant)	DC,RO,JSPCB,DF O& TA BSL, Chas Nagar Nigam,	Running
	In no way mixing of pollutants and letting the sewerage and nalas to join the ‘Garga’ / rivers. For this a proper vigilance should be mandatory.	Initiated		

### 3.4. Ground Water Extraction, Contamination and Recharge Plan:-

The original India dwells in villages. One of the major problems that our country faces is drinking water problem. And on that mostly this problem is dominant in the villages. Villages mostly depend on ground water. Extraction of ground water is done in different ways like, well, hand pumps, bore well...etc. continuous extraction of ground water to meet the demand of rising population has exhausted around 56 percent in many of the states.

**Bokaro** district has the same scenario as the whole nation. Mostly villages depend on ground water for their need. Different resources have different purpose of use e.g. pond and river- irrigation, well, hand pumps & bore wells- drinking and other domestic use.

**Tabulation of activities with objective, status, responsible functionary and timeline as below:-**

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Listing &amp; networking the deprived villages and Convergence</b>	Listing and networking of villages having water scarcity.	On-going	DC, Executive Engineer, Drinking Water and Sanitation Dept.	6 months
	Execution of all the schemes ensuring provision of drinking water for deprived villages.			1 year
<b>Awareness camps for Rain Water Harvesting</b>	Creating infrastructure for rain water harvesting structures on department buildings.	Partial	Departmental Heads	Before next monsoon
	Creating infrastructure for rain water harvesting compulsorily and passing of by-law for that.	Not-Initiated	DC & Departmental Heads	1 year
	Organizing awareness camps for making of rainwater harvesting structures like backyard sump.	Not-Initiated	DC, DFO, DDC, BDO and Head of Local Bodies	Continuing

### 3.5. Revitalization of Water Bodies:-

Considering India with respect to population it more prone about getting its water bodies like ponds and lakes dead, dry and disappear. These water bodies have been the dumping sites/points for urban as well as rural areas. In urban areas water bodies are the means of recreation which results into dumping of plastic materials, papers, water bottles by visitors. Other than that immersion of idols in both urban and rural areas are done into these water bodies. Thus, there a need of mandatory action to be taken so that these water bodies can be saved from siltation, sedimentation and weed growth. Water bodies under such condition must be re-charge so that they can get back to status of natural water retention.

Further they are polluted due to human activities such as bathing and washing of clothes.

#### Tabulation of activities with objective, status, responsible functionary and timeline as below:-

Activity	Objective s	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Inventory of Water Bodies</b>	Creating a datasheet of lakes, ponds, and rivers including the new ones constructed under schemes like MGNREGS	Partial	DC,DDC,CO	9 months
<b>Cleaning and De-siltation of Water Bodies</b>	Planned expedition for cleaning and de-siltation of lakes and other required water bodies.	Not- Initiated	DC,DDC, TA BSL, Chas Nagar Nigam, Phusro Nagar Parishad	12 months
<b>Restriction</b>	Putting a restriction on the use of soap and bathing in certain lakes and ponds by creating by-laws. Alternate supply of water to the hot spots used for bathing and washing.			15 months
<b>Treatment provision</b>	Creating provision for the treatment of effected water bodies.		DC,DDC, DFO,TA BSL, Chas Nagar Nigam, Phusro Nagar Parishad	18 months

The following table (status of Industries in Bokaro District) shows the Water status in the district:-

Status of industries in Bokaro District			
S.N.	Type of Industries	Pollution Control Arrangement	
		Air	Water
1	Coal Mines	Water spraying by tanker, Controlled Blasting.	Siltation Pond, Garland drain
2	Coal Washeries	Dust suppression by water spraying	Settling pond provided with
3	Hard Coke Plants	Down Draft / Double Tunnel with stack, Bag filter in coal crusher	Settling tank with recirculation system has been provided.
4	Soft Coke & Briquette Industries	Wet Scrubber with stack	Settling tank with recirculation
5	Refractories	Bag filter, water spraying	N/A
6	Stone Crushers	Crusher & Screen Covered, Tree plantation, Water spraying, Boundary Wall Provided.	N/A
7	Stone Mines	Tree Plantation, Manual Water spraying arrangement	
8	Thermal Power Plants	ESP, Water spraying	Ash settling pond.
9	Cement Plants	Bag House / Bag filters, Water spraying	N/A
10	Integrated Steel Plants	ESP, Bag filters, Cyclone, etc	Combined Effluent Treatment Plant
11	Sponge Iron Plant	ESP, Bag filters, Water spraying	Settling tank for recirculation.
12	Steel Products Mfg. Ind.	Fume extraction system, Water spraying etc	Cooling tower with recirculation system.
13	Red Bricks Ind.	onal Dust Settling Chamber / Induced dra	N/A
14	Quartz Grinding Ind.	Bag filter, Crusher & Screen covered, Fixed type water sprinkler installed for dust suppression	N/A
15	Flour Mills	Cyclone With Bag filter	N/A
16	Chemical Ind.	Water spraying	ETP
17	Misc. Ind.	As per list attached	As per list attached

Status of BMW Management & Disposal			
S.B.	No. of HCf	BMW Generation (Kg/day)	Pollution Control Arrangement
1	Bedded - 106	255.912	ETP/ BMW Disposed through CBWTF / Deep Burial
2	Non Bedded - 34	26.0422	BMW Disposed through CBWTF / Deep Burial

Water Quality Management	
Data of NWMP for the year 2019 is enclosed	

Air Quality Management	
OCEMS has been installed in total 07 no. of industries falling under 17 categories for online monitoring	
Installation of PM10 has been made mandatory at the industries for monitoring of Real Time Air Quality	
Notification enclosed	

Status of River Garga	
Domestic Waste water discharge from BSL Township falls into river Garga	
Municipal drains from Chas town are also falling into river Garga	
Installation of STP(s) is/are required for treatment of domestic discharge to make river Garga Pollution free.	

Note : Complete Details are as enclosed in Excel File containing corresponding sheets.

#### 4. Air Management Plan:-

Air crisis is the most serious problem of not only India but also the world. Human activities and scientific development has taken this problem to the next level. Air pollution has become the matter of great concern for the whole globe.

In no way the scene of Bokaro district in this regard is different. Being the industrial zone of the country the district has put itself at the stage of air crisis.

Following are the factors causing Air Pollution in Bokaro:-

1. Bokaro Steel Plant (SAIL BOKARO)
2. Electro Steel Plant (Talgaria)
3. Burning of solid municipal waste & domestic fuel burning emission.
4. Coal mining, Stone Mining and Crushing (will be dealt with in Section6)
5. BTPS (Kathara), CTPS (Chandrapura)
6. Vehicular Emissions
7. Other industries like Cement factory (Dalmia), JIADA.

**Tabulation of activities with objective, status, responsible functionary and timeline as below:-**

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Vigilance on Air Quality</b>	Setting up a Continuous Ambient Air Quality Monitoring Station (CAAQMS) and maintain a record of its readings for future reference.	Not Initiated	DFO and RO, JSPCB	1 year
<b>Vehicular Emissions and Dust</b>	Mandatory pollution check points for vehicles keeping loading norms of vehicular emission rules in mind as vehicle emits more smoke.	Initiated	DTO	Continuous
	Check posts must check sand and coal laden vehicles if they are covered.			
<b>Complete restriction on burning waste</b>	A by-law that must make sure that burning of municipal waste in entire district is totally and strictly prohibited.	Partial	Head of all Local Bodies	6 months
<b>Vigilance on Emissions from Designated Industrial Area</b>	Strict instruction must be given to the industries periodical to maintain air pollution levels.	Initiated	RO, JSPCB	Twice a year

Also, the abandoned mines pose a huge opportunity for land reclamation.

The following table (status of Industries in Bokaro District) shows the Air status in the district:-

Status of industries in Bokaro District			
S.N.	Type of Industries	Pollution Control Arrangement	
		Air	Water
1	Coal Mines	Water spraying by tanker, Controlled Blasting,	Siltation Pond, Garland drain
2	Coal Washeries	Dust suppression by water spraying	Settling pond provided with
3	Hard Coke Plants	Down Draft / Double Tunnel with stack, Bag filter in coal crusher	Settling tank with recirculation system has been provided.
4	Soft Coke & Briquette Industries	Wet Scrubber with stack	Settling tank with recirculation
5	Refractories	Bag filter, water spraying	N/A
6	Stone Crushers	Crusher & Screen Covered, Tree plantation, Water spraying, Boundary Wall Provided.	N/A
7	Stone Mines	Tree Plantation, Manual Water spraying arrangement	
8	Thermal Power Plants	ESP, Water spraying	Ash settling pond,
9	Cement Plants	Bag House / Bag filters, Water spraying	N/A
10	Integrated Steel Plants	ESP, Bag filters, Cyclone, etc	Combined Effluent Treatment Plant
11	Sponge Iron Plant	ESP, Bag filters, Water spraying	Settling tank for recirculation.
12	Steel Products Mfg. Ind.	Fume extraction system, Water spraying etc	Cooling tower with recirculation system.
13	Red Bricks Ind.	onal Dust Settling Chamber / Induced dra	N/A
14	Quartz Grinding Ind.	Bag filter, Crusher & Screen covered, Fixed type water sprinkler installed for dust suppression	N/A
15	Flour Mills	Cyclone With Bag filter	N/A
16	Chemical Ind.	Water spraying	ETP
17	Misc. Ind.	As per list attached	As per list attached

Status of BMW Management & Disposal			
S.B.	No. of HCf	BMW Generation (Kg/day)	Pollution Control Arrangement
1	Bedded - 106	255.912	ETP/ BMW Disposed through CBWTF / Deep Burial
2	Non Bedded - 34	26.0422	BMW Disposed through CBWTF / Deep Burial

Domestic Waste water discharge from BSL Township falls into river Garga	
Municipal drains from Chas town are also falling into river Garga	
Installation of STP(s) is/are required for treatment of domestic discharge to make river Garga Pollution free.	

Note : Complete Details are as enclosed in Excel File containing corresponding sheets.

#### 4.1. 122 Non-Attainment Cities

Bokaro is not in the list of Non-attainment cities.

#### 5. 100 Industrial Clusters

Bokaro is not a polluting industrial cluster.

#### 6. Mining Activity Management Plan:-

Bokaro district has mainly coal mining, stone mining and sand mining and the related activities.

Activity	Licensed Units
Coal	09
Stone Mining	19
Sand Mining	02

Mining creates occupational illness. Coal mining and stone mining are kinds of mining which create high life risk. Sand mining creates a low risk. Related activities like loading, dumping, furnace use and stone crusher also create occupational illness. Stone crushers even cause respiratory risk to passers by.

**Tabulation of activities with objective, status, responsible functionary and timeline as below:-**

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
Prevention of Dust around Crushers	Quarterly report submission in compliance with CTO by crusher units, Non- complying units to be taken under surveillance.	Partial	DMO, JSPCB	3 months
	Crushers to be set up with dust soakers and sprinklers compulsorily.	Partial initiated		
	Crushers to have fencing of dust-cum-visual barrier.			
Occupational Safety	Wearing of dust preventive masks by every employee to ensure occupational safety.	Initiated		

## 6.1. Sustainable Sand Mining:-

Guidelines issued by MoEF&CC as well as Jharkhand state regarding sustainable sand mining ensures the future of sand mining.

The salient features of Sand Mining Policy notified by Jharkhand State in 2017 are as follows:-

### **District Survey Report to be prepared mandatorily.**

1. Streams/River to be categorized.
2. The District Survey Committee shall fix the sand order available in different order of streams such as 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, ...etc. based on its size and capacity
3. Management of Sand Deposits of Category-1Streams/Rivers
4. Management of Sand Deposits of Category-2Streams/Rivers
5. The sand deposits of Category-1 stream/rivers will be kept fully free from domain of grant of mining lease.
6. The Sand deposits of Category-2 shall be managed by State Government.

Mining policy 2017 states that each district has to prepare District Survey Report (DSR), stating the available potential of minor mineral in a district and also to calculate sustainable mining rates for different sand mining river points.

**DSR of Bokaro is under procedure that will reveal** the depth as well as amount of annual sand that can be mined. Thus, immediate update is expected.

Tabulation of activities with objective, status, responsible functionary and timeline as below:-

Activity	Objectives	Status	Responsible Functionary(ies)	Expected Time after approval of DEP
<b>Preparation &amp; Submission of DSR</b>	Review and updating of DSR to calculate the rate of annual sustainable sand mining (Ghat wise) and categorize the river stream.	Partial	Geologist, District Geology Office	6 months
<b>Record of amount of extraction</b>	Balu Ghats Lease holders to keep the record of the amount of sand extracted from their lease area and its random checking.		SP, DMO, Mining Task Force,	Continuous
<b>Vigilance on Illegal Sand Mining</b>	Monsoon sand mining to be totally prohibited. Proper vigilance on illegal extraction and sale of sand.			

## 6.2 Sustainable Stone Mining:-

**DSR of Bokaro is under procedure that will reveal** the depth as well as amount of annual Stone that can be mined. Thus, immediate update is expected.

Tabulation of activities with objective, status, responsible functionary and timeline as below:-

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
Preparation & Submission of DSR	Review and updating of DSR to calculate the rate of annual sustainable Stone mining ( Stone Mining wise) and categorize the hilly area.	Partial	Geologist, District Geology Office	6 months
Record of amount of extraction	Stone Mining Lease holders to keep the record of the amount of stone extracted from their lease area and its random checking.		SP, DMO, Mining Task Force,	Continuous
Vigilance on Illegal Stone Mining	Proper vigilance on illegal extraction and sale of stone.			

### 6.3 Sustainable Coal Mining:-

**DSR of Bokaro is under procedure that will reveal** the depth as well as amount of annual sand that can be mined. Thus, immediate update is expected.

**Tabulation of activities with objective, status, responsible functionary and timeline as below:-**

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Preparation &amp; Submission of DSR</b>	Review and updating of DSR to calculate the rate of annual sustainable coal mining (mine wise).	Partial	Geologist, District Geology Office	6 months
<b>Record of amount of extraction</b>	Coal mining Lease holders to keep the record of the amount of COAL.		SP, DMO, Mining Task Force,	Continuous
<b>Vigilance on Illegal Coal Mining</b>	Monsoon COAL mining to be totally prohibited. Proper vigilance on illegal extraction and sale of COAL.			

### 7. Noise Pollution Management Plan:-

Noise pollution causes a kind of physical disability. This is one of the major environmental problems in our country. Mainly it is caused by vehicles, industries, loud music....etc.

Since Bokaro is an industrial area hence noise pollution is evident here. Measures taken by the district administration for maintaining a peaceful ambience are as follows:-

1. Educational institutions and hospitals to be kept free from noise creating elements.
2. No noise causing element should lie in an area of 100 mtrs. From a school/hospital.
3. Penalty on violating the noise norms.
4. Awareness programs about the harms of creating noise and noise is a kind of pollution.
5. Loud horns, amplifiers, DJ, to be strictly restricted according to Noise Control Regulation Act-1951-2000.
6. Low sound explosive and siren to be used by the industries.

**Tabulation of activities with objective, status, responsible functionary and timeline as below:-**

Activity	Objectives	Status	Responsible Functionary (ies)	Expected Time after approval of DEP
<b>Restriction on high noise creating elements</b>	Loud horns, amplifiers, DJ, to be strictly restricted according to Noise Control Regulation Act-1951-2000.	Initiated	SP, SDM	Continuous
<b>Educational institutions/hospitals</b>	Educational institutions and hospitals to be kept free from noise creating elements. No noise causing element should lie in an area of 100 mtrs. From a school/hospital		SP, SDM	Continuous
<b>Industries &amp; vehicles</b>	Penalty on violating the noise norms. Proper vigilance on loud noise explosive, siren & vehicle horns.			

**8. Financial Projections:-**

Will be done in due course of time.

<b>WQ3a</b>		Creation of monitoring cell	[Yes] / [No]	Yes

<b>WQ3b</b>		Access to Surface water and groundwater quality data at DM office	[Available] or [Not available]	Available
<b>WQ4</b>	Control of River side Activities			
<b>WQ4a</b>	Control of River side Activities	River Side open defecation	[Fully Controlled] / [Partly controlled] / [no Measures taken]	Fully Controlled
<b>WQ4b</b>		Dumping of SW on river banks	[Fully Controlled] / [Partly controlled] / [no Measures taken]	Partly controlled
<b>WQ4c</b>		Control measures for idol immersion	[Measures taken] / [Measures taken post immersion] / [No Measures taken]	No measures taken
<b>WQ5</b>	Control of Water Pollution in Rivers			
<b>WQ5a</b>		Percentage of untreated sewage	[%] (automatic SM1g/SM1a)	Automatic SM1g/SM1a
<b>WQ5b</b>		Monitoring of Action Plans for Rejuvenation of Rivers	[Monitored] / [Not monitored] [not applicable]	Monitored
<b>WQ5c</b>		No of directions given to industries for Discharge of Untreated industrial wastewater in last 12 months	[Nos]	0
<b>WQ6</b>	Awareness Activities			
<b>WQ6a</b>		District level campaigns on protection of water quality	[Nos in previous year]	From 3rd- 8th Oct Under Jal Jeevan Mission
<b>WQ6b</b>	Oil Spill Disaster Contingency Plan			
<b>WQ6a</b>		Creation of District Oil Spill Crisis Management Group	[Created] / [Not Created]	Not Created

<b>WQ6b</b>		Preparation District Oil Spill Disaster Contingency Plan	[Prepared] / [Not Prepared]	Not Prepared
<b>WQ7</b>	Protection of Flood plains			
<b>WQ7a</b>		Encroachment of flood plains is regulated.	[Yes] / [No]	No
	Rainwater Harvesting			
<b>WQ8a</b>		Action plan for Rain water harvesting	[Implemented] / [Not implemented]	Implemented

### 3.0 Domestic Sewage Management Plan

No.	Action Areas	Details of Data Requirement	Measurable Outcome	Please enter Measurable Outcome for District
<b>SM1</b>	Inventory of Sewage Management			
<b>SM1a</b>		Total Quantity of Sewage generated in District from Class II cities and above	[MLD]	29 MLD
<b>SM1b</b>		No of Class-II towns and above	[Nos]	2
<b>SM1c</b>		No of Class-I towns and above	[Nos]	1
<b>SM1d</b>		No of Towns needing STPs	[Nos]	4
<b>SM1e</b>		No of Towns STPs installed	[Nos]	Null
<b>SM1f</b>		Quantity of treated sewage flowing into Rivers (directly or indirectly)	[MLD]	29
<b>SM1g</b>		Quantity of untreated or partially treated sewage (directly or indirectly)	[Automatic]	NA
<b>SM1h</b>		Quantity of sewage flowing into lakes	[MLD]	4

<b>SM1i</b>		No of industrial townships	[Nos]	1
<b>SW2</b>	Adequacy of Available Infrastructure for Sewage Treatment			
<b>SM2a</b>		% sewage treated in STPs	[Automatic]	Nil
<b>SM2b</b>		Total available Treatment Capacity	[MLD]	NA
<b>SM2c</b>		Additional treatment capacity required	[MLD]	NA
<b>SM3</b>	Adequacy of Sewerage Network			
<b>SM3a</b>		No of ULBs having partial underground sewerage network	[Nos]	1
<b>SM3b</b>		No of towns not having sewerage network	[Nos]	1
<b>SM3c</b>		% population covered under sewerage network	[Automatic]	2 Lakh people Covered

#### 4.0 Industrial Wastewater Management Plan

No.	Action Areas	Details of Data Requirement	Measurable Outcome	Please enter Measurable Outcome for District
IWW1	Inventory of industrial wastewater Generation in District			
IWW1a		No of Industries discharging wastewater	[Nos]	01
IWW1b		Total Quantity of industrial wastewater generated	[MLD]	8100 KLD
IWW1c		Quantity of treated IWW discharged into Nalas / Rivers	[MLD]	8100 KLD
IWW1d		Quantity of un-treated or partially treated IWW discharged into lakes	[MLD]	N/A
IWW1e		Prominent Type of Industries	[Agro based] / [ Chemical – Dye etc.] / [Metallurgical] / [Pharma] / [Pesticide] / [Power Plants] / [Mining] / [Automobile] : Multiple selection based on size of operation and number	Integrated Steel, TPP, Coal Mines & Washeries
IWW1f		Common Effluent Treatment Facilities	[Nos] / [No CETPs]	Nil

IWW2	Status of compliance by Industries in treating wastewater			
IWW2a		No of Industries meeting Standards	[Nos]	12 (GPI & 17 Cat Ind.)
IWW2b		No of Industries not meeting discharge Standards	[Automatic]	Nil
IWW2c		No of complaints received or number of recurring complaints against industrial pollution in last 3 months	[Nos]	Nil
AWW4	Status of Action taken for not meeting discharge standards			
IWW4a		No industries closed for exceeding standards in last 3 months	[Nos]	Nil
IWW4b		No of industries where Environmental Compensation was imposed By SPCBs	[Nos]	02

## 5.0 Air Quality Management Plan

No.	Action Areas	Details of Data Requirement	Measurable Outcome	Please enter Measurable Outcome for District
AQ1	Availability of Air Quality Monitoring Network in District			
AQ1a		Manual Air Quality monitoring stations of SPCBs /CPCB	[Nos] / [None]	[0]
AQ1c		Automatic monitoring stations Operated by SPCBs / CPCB	[Nos] / [None]	[0]
AQ2	Inventory of Air Pollution Sources			
AQ2a		Identification of prominent air polluting sources	[Large Industry] / [Small Industry] / [Unpaved Roads] / [Burning of Waste Stubble] / [Brick Kiln] / [Industrial Estate] / [Others] (Multiple selection)	Large Industry (Integrated Steel/ Thermal Power Plants / Coal Mine & its Transportation)
AQ2b		No of Non-Attainment Cities	[Nos] / [None]	Vehicular exhaust
AQ2c		Action Plans for non-attainment cities	[Prepared] / [Not yet prepared]	[0]
AQ3	Availability of Air Quality Monitoring Data at DMs Office			
AQ3a		Access to air quality data from SPCBs & CPCB through Dashboard	[Available] / [Not yet Available]	[N/A]
AQ4	Control of Industrial Air Pollution			

AQ4a		No of Industries meeting Standards	[Nos]	[Non]
AQ4b		No of Industries not meeting discharge Standards	[Nos]	[Non]
AQ5	Control of Non-industrial Air Pollution sources			
AQ5a		Control open burning of Stubble –during winter	[Nos of fire incidents]	[N/A]
AQ5b		Control Open burning of Waste – Nos of actions Taken	[Nos]	[N/A]
AQ5c		Control of forest fires	[SOP available] / [No SoP]	[N/A]
AQ5d		Vehicle pollution check centers	[% ULBs covered]	[N/A]
AQ5e		Dust Suppression Vehicles	[% ULBs covered]	[N/A]
AQ6	Development of Air Pollution complaint redressal system			
AQ6a		Mobile App / Online based air pollution complaint redressing system of SPCBs.	[Available] / [Not available]	[No]

## 6.0 Mining Activity Management plan

No.	Action Areas	Details of Data Requirement	Measurable Outcome	Please enter Measurable Outcome for District
MI1a	Inventory of Mining in District			
MI1a		Type of Mining Activity	[Sand Mining] / [Iron Ore] / [Bauxite] / [Coal] / Other [specify] Multiple selection in order of magnitude of operations	09 Coal Mining, 19 stone, 02 sand & 05 Quatrzit
MI1b		No of Mining licenses given in the District	[Nos]	35
MI1c		Area covered under mining	[Sq. Km]	Non Inventory
MI1d		Area of District	[Sq. Km]	2883
MI1e		Sand Mining	[Yes] / [No]	Yes 38 sand Ghats Auctioned in Financial Years 2015-16 for Three Year.
MI1f		Area of sand Mining	[River bed] / [Estuary] / [Non -river deposit]	River Bed
MI2	Compliance to Environmental Conditions			
MI2a		No of Mining areas meeting Environmental Clearance Conditions	[Nos]	35
MI2b		No of Mining areas meeting Consent Conditions of SPCBs / PCCs	[Nos]	35

MI3a	Mining related environmental Complaints			
MI3b		No of pollution related complaints against Mining Operations in last 1 year	[Nos]	Nill
MI4	Action against non-complying mining activity			
MI4a		No of Mining operations suspended for violations to environmental norms	[Nos]	Nill
MI4b		No od directions issued by SPCBs	[Nos]	Nill

## 7.0 Noise Pollution Management Plan

No.	Action Areas	Details of Data Requirement	Measurable Outcome	Please enter Measurable Outcome for District
NP1	Availability Monitoring equipment			
NP1a		No. of noise measuring devices with district administration	[Nos] / [None]	2
NP1b		No. of noise measuring devices with SPCBs	[Nos] / [None]	3
NP2	Capability to conduct noise level monitoring by State agency / District authorities			
NP2a		capability to conduct noise level monitoring by State agency / District authorities	[Available] / [Not available]	Available
NP2	Management of Noise related complaints			
NP2a		No of complaints received on noise pollution in last 1 year	[Nos]	18
NP2b		No of complaints redressed	[Nos]	18
NP3	Compliance to ambient noise standards			
NP3a		Implementation of Ambient noise standards in residential and silent zones	[Regular Activity] / [Occasional] / [Never]	As per Noise Regulation Rule, 2000 District Administration is the authority for compliance of ambient noise standard.

NP3b		Noise monitoring study in district	[carried out] / [not carried out]	DO
NP3c		Sign boards in towns and cities in silent zones	[Installed] / [Partial] / [Not Installed]	DO
